Evaluation Methodology For COVID-19 Infrastructure Program (Round 4) Bicycle/Pedestrian Projects

Category	Regional Network Connectivity or Strong Context Design	Implementation of Mobility Plan	Safety	Regional Partnership and Other Factors
Description	Improves connectivity of Mobility 2045 regional paths and bikeways between cities and counties. The design is suitable for the context of the location and provides high comfort for users of all ages and abilities.	Improves connectivity of Mobility 2045 regional paths and bikeways between cities and counties. Provides alternative travel options in lieu of motor vehicle trips in areas with greater opportunity for walking and bicycling, thus improving air quality.	Improves safety and provides facilities for pedestrians and bicyclists, and is located in an area with document high crash history and/or safety concerns.	NCTCOG has been actively coordinating with the implementing agency to advance planning and preliminary engineering. Project scope of work is well defined and coordinated with NCTCOG. Addresses other factors related to project impact upon the community.
Points (max)	25 (max)	25 (max)	25 (max)	25 (max)
High Criteria / Scoring Range (16-25 Points)	Project is on the Regional Veloweb (regionally significant) and provides connectivity between multiple jurisdictions. Project is identified along a regionally- significant bikeway corridor. Project provides pedestrian connections to major designations such as employment centers, downtowns, and higher density areas with a low stress/high comfort facility ² .	gap closure is long, resulting in significant continuous network mileage. Project connects	Project is located in an area with high bicycle and/or pedestrian crash density, or implements	Considerable design and engineering is complete and/or has been advanced by NCTCOG partnerships and funding. Project is feasible with realistic cost estimates. Project's benefits appear to justify the cost.
	Project is on the Regional Veloweb (regionally significant), but is limited to one jurisdiction. Project's length is moderate to short. On-street bikeway facilities connect and extend an existing Regional Veloweb. Pedestrian connections are to major destinations per Mobility 2045 with a low stress/high comfort facility. ²	gap or extends an existing Regional Veloweb	Project includes a low stress/high comfort facility in a medium to low bicycle and/or pedestrian crash density area. ² Project is a safety countermeasure addressing a known issue but not identified in a safety report or audit.	Project has some progress in preconstruction (engineering and design). Project's benefits justify the cost. Project has moderate evidence of public support.
Low Criteria / Scoring Range (0- 5 points)	Project is local in nature and provides limited benefit to the larger area (not regionally significant). Project is located in an area with no or low density of short trip by motor vehicles, but may provide direct access to local destinations. Project does not include a low stress/high comfort facility. ²	not provide access to major destinations. Pedestrian facilities are consistent with the	Project area has no documented safety issues. Project is not in a bicycle and/or pedestrian crash density area. Project provides some inherent safety benefit.	No schematic design or engineering has been completed for project. Project may not be feasible and benefits may not justify the costs. Project has no evidence of public support, or limited documentation was available to justify the project benefits.

² A low stress / high comfort facility is considered a wide sidewalk (minimum 5 feet in width) for pedestrians or a minimum 10-14 foot wide off-street shared-use path for both pedestrians and bicyclists, or separated/protected bike lanes or on-street bike lanes with a suitable design for users of all ages and abilities based on the context of the project location (e.g. projected traffic volumes, speeds, adjoining land uses, etc.). Such project design must be consistent with relevant Design Guidelines and resources including AASHTO, NACTO, ITE, FHWA, and TxDOT.

Evaluation Methodology For COVID-19 Infrastructure Program (Round 4) Complete Streets Projects

Regional Network Connectivity or Strong Context Design

Lowest Score: 0; Highest Score: 25

Breakdown:*

- <u>0</u>: No other modes beyond auto provided for
- 10: One additional usage added (auto + pedestrian)
- <u>15:</u> Two or more modes, (auto, ped, bicycle, potential transit); bicycle accommodation is narrow or on-street bicycle lane 25: Adds enhanced bicycle + ped infrastructure separating the users from the roadway, enhanced transit accessibility

*Points adjusted based on land use and opportunities for redevelopment

Implementation of Mobility Plan: 0-25

Projects included in Mobility Plan or supported/were consistent with goals/policies in the Mobility Plan. Some adjustments made for other areas of the plan affected such as freight, transportation and land use compatibility, etc.

Safety

Lowest Score: 0 (no data); Highest Score: 25

Breakdown:**

0: No safety improvements mentioned

10: Sidewalks only

<u>15</u>: Bicycle path removes bicycle from roadway; enhanced pedestrian safety (wider sidewalks, lighting, ramps); and/or provides safety infrastructure for both bikes and peds; and/or adds another element (signal redesign, traffic calming) or increased safety at intersections (bump outs, etc.)

25: Also adds additional roadway safety (median, etc.); signalized ped crossings, enhanced bicycle/ped infrastructure or traffic calming

**Points adjusted for proximity to schools with improvements for safe travel and crossings near schools

Partnership: 0 to 25

Projects coordinated with COG with advance planning and/or engineering and/or multi-jurisdictional project. Level of advance planning and stakeholder involvement evaluated. Funding partnerships with other entities evaluated as well.

Evaluation Methodology For COVID-19 Infrastructure Program (Round 4) Intersection Projects

Initial Screen: Is the roadway at least a Major Collector on the FFCS (or can it justifiably be added)?

Safety (# of crashes from 2016-2020)	Air Quality Benefits (NOx reduction in Ibs/day)	Cost Effectiveness (Cost/Ib of NOx reduced over project life)	Traffic Volumes	Level of Service	Equity (i.e., project is located in an EJ area)
≥ 76 = 20	> 0.5 lbs/day = 15	≤ \$999 = 15	≥ 30,000 = 20	F = 20	3 layers touched (no buffer)= 10
40-75 = 15	0.26-0.5 lbs/day = 10	\$1,000-\$4,999 = 10	20,000-29,999 = 15	DE = 15	1-2 layers touched (no buffer) = 8
16-39 = 10	0.01-0.25 lbs/day = 5	≥ \$5,000 = 5	10,000-19,999 = 10	ABC = 5	3 layers within .25 miles = 6
≤ 15 = 5			≤ 9,999 = 5		1-2 layers within .25 miles = 4
					Any number of layers within .5 mile
					= 2
					No layers within .5 mile = 0

Notes:

Projects may receive a maximum possible score of 100.

NOx = Nitrogen Oxides

Source of crash data: Texas Department of Transportation

Equity score accounts for Minority, Low Income, and Limited English

Proficiency populations

Evaluation Methodology For COVID-19 Infrastructure Program (Round 4) Addition of Lanes Projects

Initial Screen: Is the roadway at least a Major Collector on the FFCS (or can it justifiably be added)? Are additional lanes warranted?

Safety (# of crashes)	Traffic Volumes	Level of Service	Equity (i.e., project is located in an EJ area)	Pavement Condition	Bridge Deficiency	Freight Connectivity
≥ 211 = 20	≥ 40,000 = 25	F = 25	3 layers touched (no buffer)= 10	≥ 75 = 15	Poor Condition = 10	Y = 5
78-210 = 15	30,000-39,999 = 20	DE = 20	1-2 layers touched (no buffer) = 8	50-74 = 10	Fair Condition = 5	N = 0
20-77 = 10	20,000-29,999 = 15	ABC = 5	3 layers within 0.25 miles = 6	25-49 = 5	Good Condition/No data available/Project does not cross a bridge = 0	
≤ 19 = 5	10,000-19,999 = 10		1-2 layers within 0.25 miles = 4	≤ 24 or No data available = 0		
0 = 0	≤ 9,999 = 5		Any # of layers within 0.5 mile = 2			
			No layers within 0.5 mile = 0			

Notes:

Projects may receive a maximum possible score of 110

Source of crash data: Texas Department of Transportation (TxDOT) (2016-2020)

FFCS = Federal Functional Classification System

Equity score accounts for Minority, Low Income, and Limited English Proficiency populations

EJ = Environmental Justice

Pavement Condition score derived from percentage of segments deemed to be Good, Fair, and Poor

Source of Pavement Condition data: Pavement Management Information System (PMIS)

Source of Bridge data: National Bridge Inventory and TxDOT

Evaluation Methodology For COVID-19 Infrastructure Program (Round 4) New Roadways

Initial Screen: Are additional lanes warranted?

Traffic Volumes	Level of Service	Equity (i.e., project is located in an EJ area)
≥ 40,000 = 40	F = 40	3 layers touched (no buffer) = 20
30,000-39,999 = 30	DE = 30	1-2 layers touched (no buffer) = 16
20,000-29,999 = 25	ABC = 15	3 layers within 0.25 miles =12
10,000-19,999 = 20		1-2 layers within 0.25 miles = 8
≤ 9,999 = 15		Any # of layers within 0.5 mile = 4
		No layers within 0.5 mile = 0

Notes:

Projects may receive a maximum possible score of 100

Equity score accounts for Minority, Low Income, and Limited English Proficiency populations

EJ = Environmental Justice
