Fiscal Year 2012 and Fiscal Year 2013 Unified Planning Work Program (UPWP) Modifications

The UPWP for regional transportation planning provides a summary of the transportation and related air quality planning tasks conducted by the metropolitan planning organization. Modifications to the Fiscal Year 2012 and Fiscal Year 2013 UPWP will be presented for public review and comment.

General Aviation and Heliport System 2035

General aviation is any civilian flying other than scheduled commercial airline service. Some of the most recognizable services that general aviation provides are overnight mail delivery, medical evacuation and airborne law enforcement. In addition to these services, general aviation has many other purposes such as flight training and corporate and personal transportation. The Dallas-Fort Worth area is home to more than 400 public- and private-use aviation facilities. Both based aircraft and aircraft operations are expected to steadily increase through 2035, according to the draft long-term general aviation and heliport system plan. Staff will present the draft plan that sets a new strategic vision for advancing general aviation and heliport resources in and around the Dallas-Fort Worth area and outline next steps.

Draft Regional Complete Streets Initiative

Complete streets are safe, comfortable and convenient for travel for everyone, including drivers, bicyclists, pedestrians, transit riders and operators, commercial vehicles and emergency responders. This is accomplished by incorporating context sensitive strategies that focus on planning for, designing, building and maintaining the necessary infrastructure while also integrating elements that encourage safe and convenient walking, bicycling and transit use. The result is often improved safety, lowered individual transportation costs, improved air quality, added transportation alternatives and encouraged health through walking and biking. From street to street, the strategies may differ, and a complete street in a rural area will look significantly different from one in an urban area. However, the resulting balance is the same. Staff is developing a draft regional policy consistent with federal and state guidance as well as an overview that offers recommendations for implementation of context sensitive strategies at the local level.

Audio and information from the public meetings will be posted at www.nctcog.org/meetings.
