

Automated Transportation Systems

Solve today's transportation needs with next-generation transit

ATS Defined

ATS are **automated**, track-free vehicles on **elevated** surfaces securely transporting **people** and **cargo**.

Potential applications include:

- High-density mixed-use developments
- College or business campuses
- Major urban centers / CBDs
- Regional transit connections to key destinations

ATS Leverages

Flexible vehicle technology to adjust for changing needs/demand

Future-proof systems design for future technology advances

Vehicle Automation and advancing battery technology to minimize operational costs while maximizing service

Benefits of Automated Transportation Systems

 Economies of Scale Through Regional Support

 Enhanced Air Quality with Green Technology

 Better Access Within High-Traffic Areas

 Increased Pedestrian Safety
