No Limits on Learning

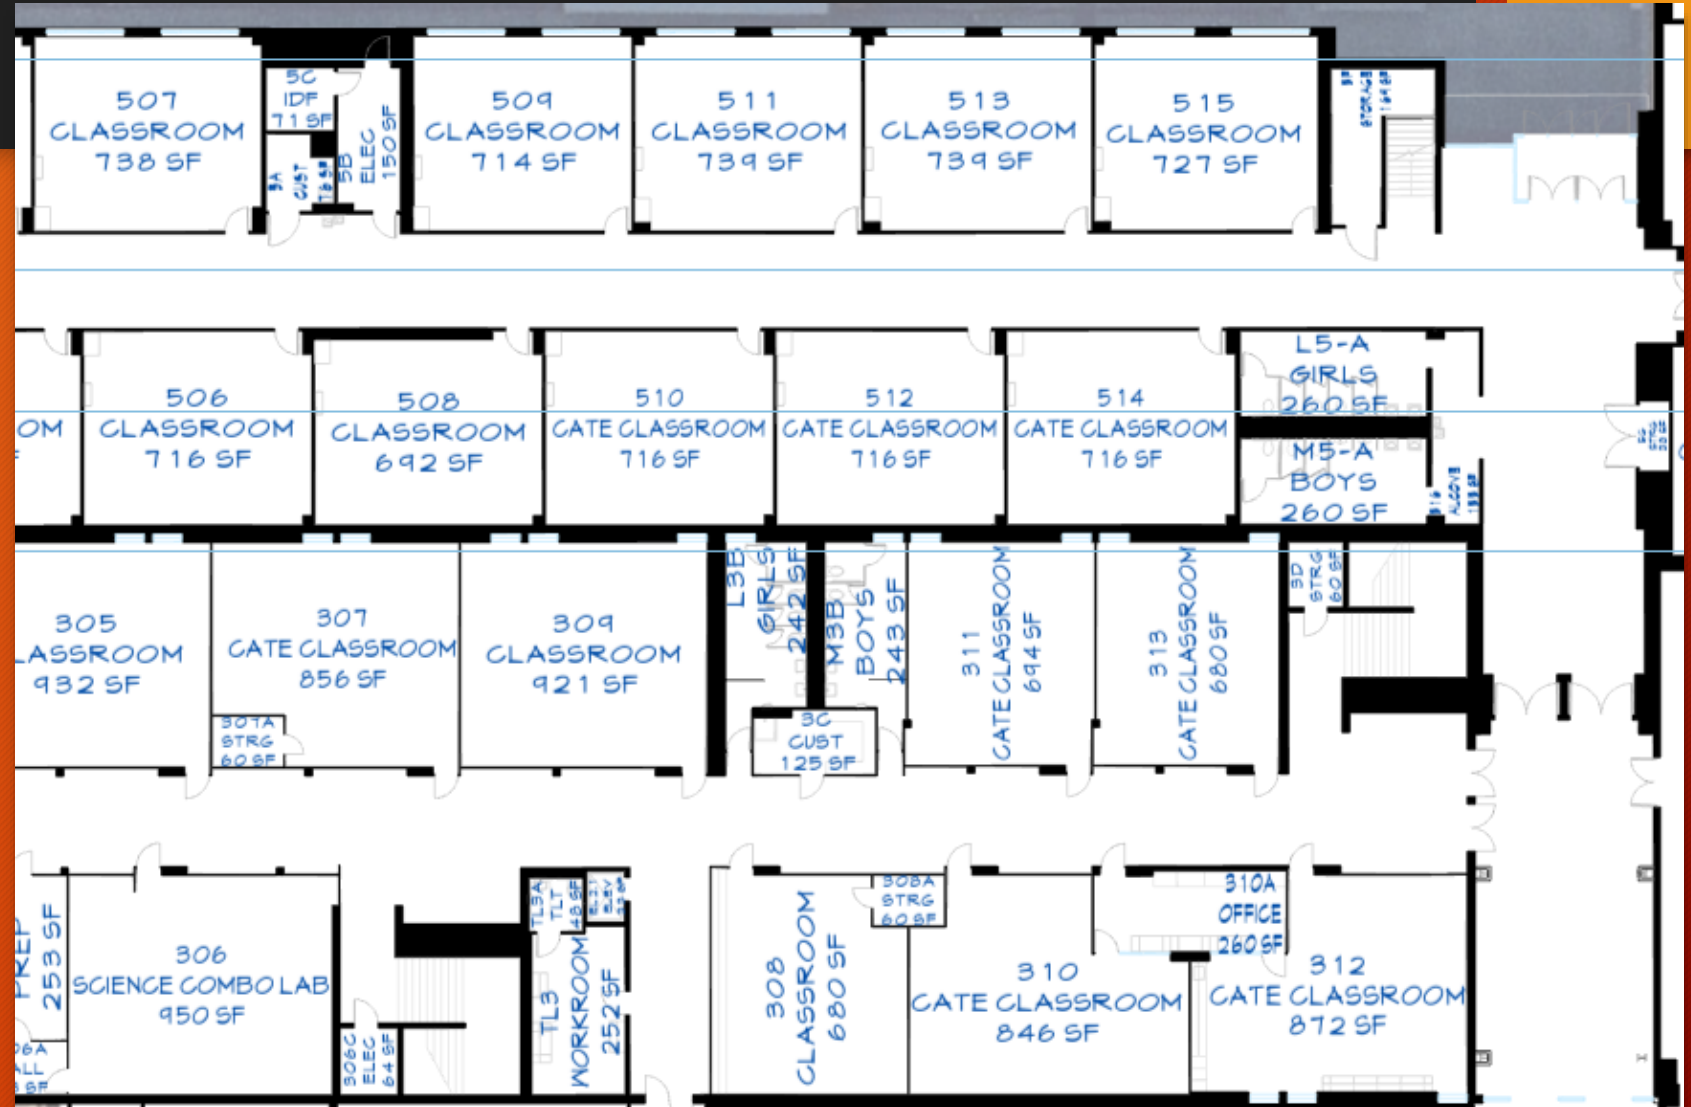

And Multiple Doors per
Campus...

CAD to GIS

For several years we have had our School floorplans in our GIS system.

We extract and build our GIS feature classes from our CAD drawings of each facility.

Security Data

Last year we were working on digitizing various assets for security.

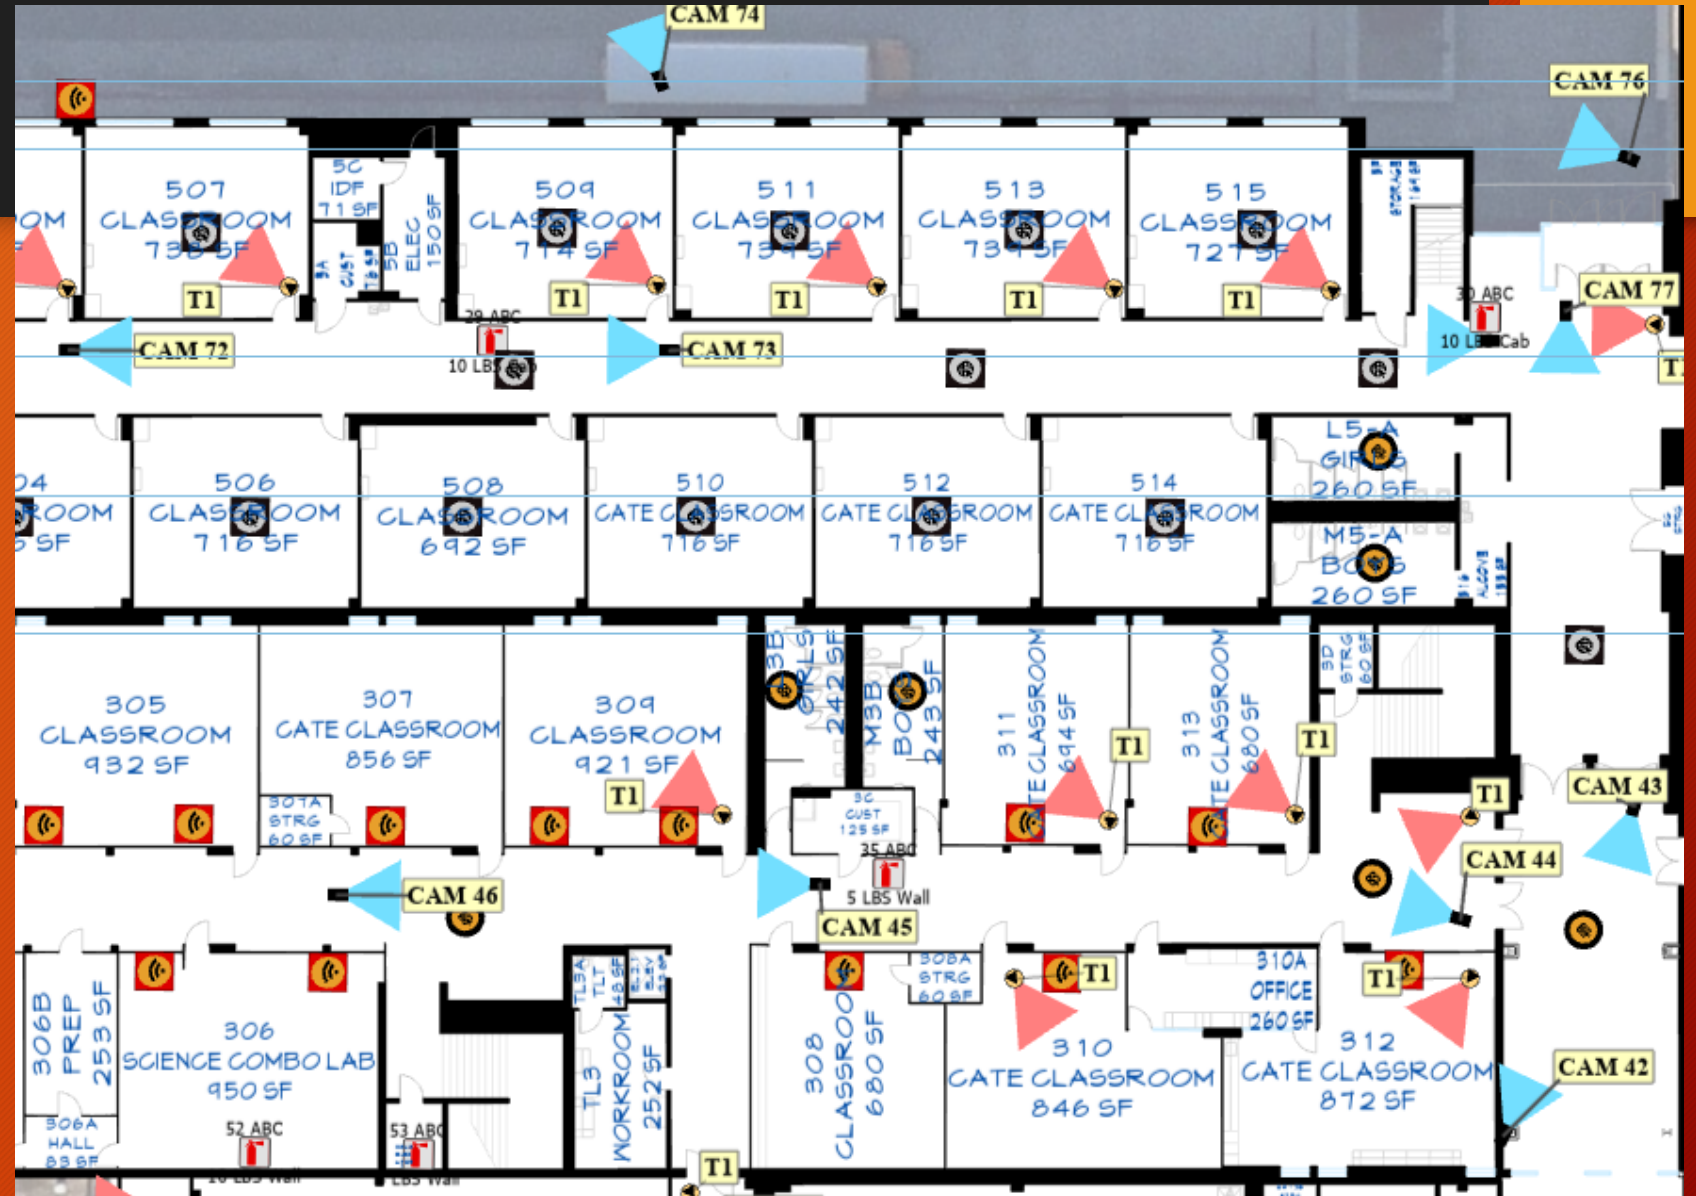

Cameras

Motion Sensors

Fire Extinguishers

PA System

Etc...

Doors

One of the data sets we were updating was door entry numbers.

Doors are numbered clockwise around the building perimeter to aid emergency responders when they need to quickly find a particular entrance.

On our maps a green entry has an electronic card reader and a red entry does not.

Then there was a tragedy in south Texas and school doors became an issue on every news station.

Unlocked Doors Were 'First Line of Defense' at Uvalde School

The Uvalde massacre began after the 18-year-old gunman entered the school through a door that could only be locked from the outside and then got inside a classroom that had a busted lock.

Door security audits were mandated

GIS had meetings with both GISD Maintenance and GISD Security to discuss what needed to be done.

THE TEXAS TRIBUNE INVESTIGATIONS NEWSLETTERS EVENTS AUDIO DATA

UVALDE SCHOOL SHOOTING

Gov. Greg Abbott instructs school safety officials to conduct “unannounced, random intruder” audits of Texas public schools

Abbott has tasked the Texas School Safety Center with conducting in-person, unannounced audits of public schools to see how quickly staff can enter a building without being stopped and detect weak points.

TEA sent out instructions

EXTERIOR DOOR COMPONENTS

This page is intended to help school districts understand and identify the minimum door standard components and requirements for standard hinge door types. The images used are examples only and are not to be considered the only option or type of that specific component.

The following components should be checked to see if operable on all exterior building hinge door types.

Component	Image	Description	Review Process
Sturdy Mullion (Double Door Only)		If part of exit of double doors, sturdy center mullion.	With both doors open, push and pull the mullion. The mullion should be sturdy and not move.
Reinforced Door Frame		Constructed of solid material (typically metal) that can't be easily breached.	Confirm that the frame is made of solid material.
Auto Door Closer		A mechanism that fully closes automatically after entry or egress without manual intervention, regardless of air pressure within or outside of the facility.	To ensure this mechanism properly works, the release air conditioning unit should be on to create positive airflow of air pressure. Then open the door fully, then door should automatically shut completely, and latch.
Auto Door Lock		A mechanism that fully engages locking hardware automatically after entry or egress without manual intervention.	Open the door, after the door closes, it should be back latched and locked from the outside. Someone on the outside must confirm that the door is locked externally.
Emergency Open Mechanism		A mechanism that allows the door to be opened from the inside when locked, without a key, and the door remains locked.	With the door locked, the door should be able to be opened from the inside. After it is opened from the inside, it should remain locked from the outside after locked from the inside.
All Non-Hinged Doors		Any door that is not a hinge door should be verified that it can close and lock.	Physically confirm that the door can close and lock. This information will not be collected on the Door Audit Sheet.

Required School Safety Action Steps This Summer

[taa-required-school-safety-action-steps-this-summer.pdf](#)

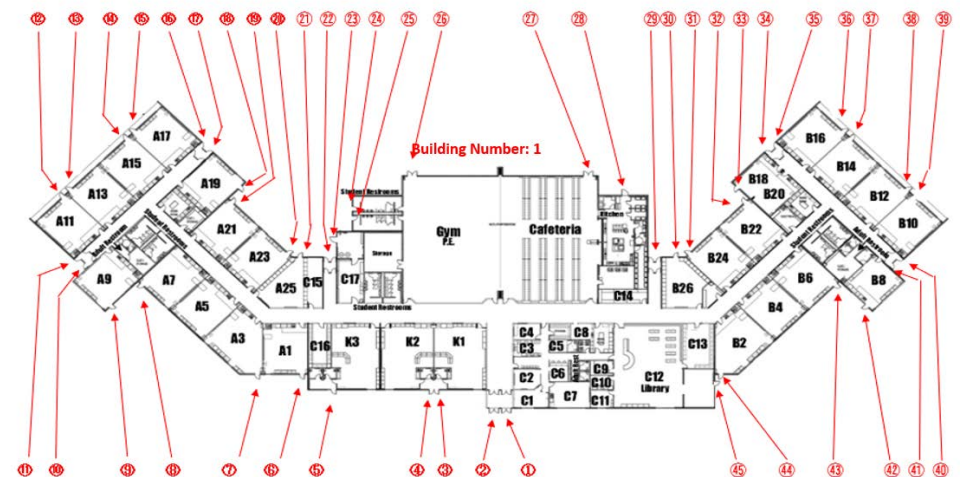

Date: June 30, 2022

Subject: Required School Safety Action Steps Th

Category: School Safety

Next Steps: Begin actions related to safety audits, i

Sample Facility Exterior Door Identification

<https://tea.texas.gov/about-tea/news-and-multimedia/correspondence/taa-letters/required-school-safety-action-steps-this-summer>

We had to assess our data

Exterior Door Safety Audit Tracker

This tool is designed to help educational leaders perform an exterior door audit to identify security risks to their campus. Individuals performing the exterior door should assess whether or not each of the door safety components are:

Operational (O) Put an **O** in the cell if the component **works** as intended.

Non-Operational (NO) Put an **NO** in the cell if the component **does not work** as intended.

Not Present (NP) Put an **NP** in the cell if this component is **not present**.

Not Applicable (NA) Only put **NA** for Sturdy Mullion on all single doors

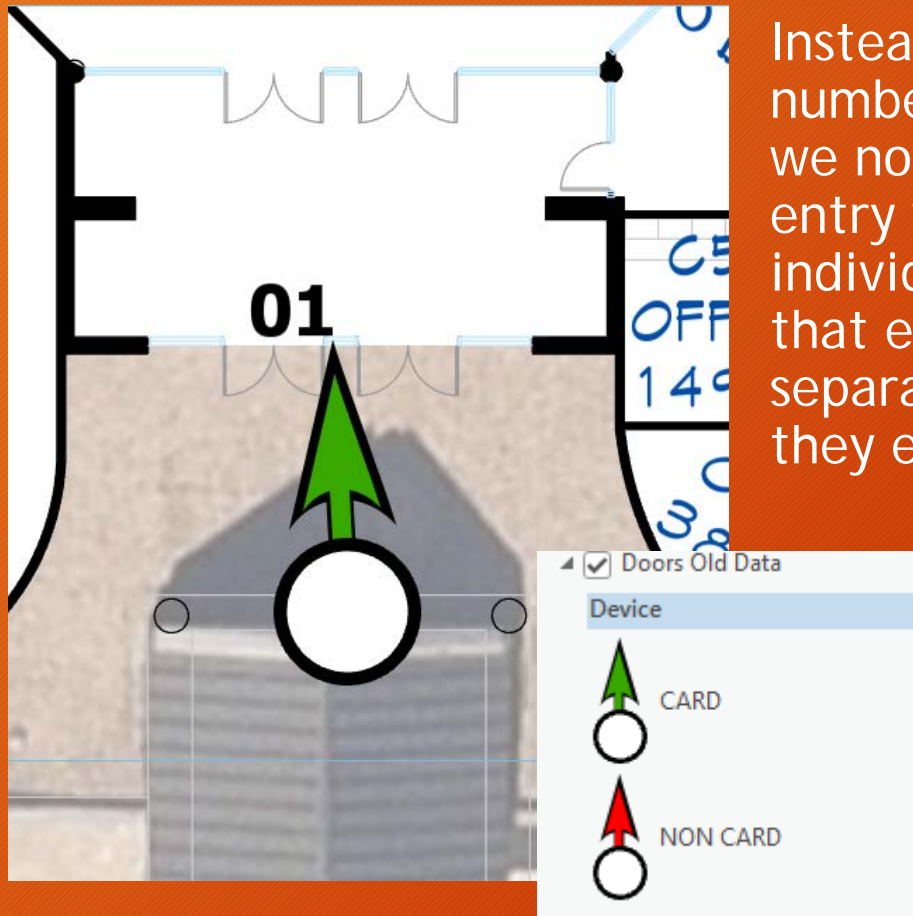

Note: Your campus identifier, building number, and door number convention may differ from the example below.

Campus	Building	Door Number	Sturdy Mullion <small>(Double Doors Only - Put NA for all other doors)</small>	Reinforced Door Frames	Auto Door Closer	Auto Door Lock	Emergency Open Mechanism
Example01	E1	1.1	O	O	O	O	O
Example01	E1	1.2	NA	O	NO	O	NP

Certain assets needed to be inventoried for every exterior door. We met with Maintenance and Security again to discuss what data we had and what needed to be collected.

More detail in door data

Instead of just marking the numbered door entries on our map we now identify the numbered entry with a polygon and each individual door as a point within that entry. Mullions are also a separate point feature class since they exist between two doors.

More detail in door data

ESRI Field Maps deployed for door inspections

ESRI Field Maps deployed for door inspections

Field Maps works in IOS and Android, while the initial response to this app was positive it was decided that we could not proceed with out a desktop based inspection solution.

We needed a little help

We reached out to David McCourt at Softwhere Solutions for help developing a desktop app. This is what we came up with

Doors for GARLAND HS - 002

Spring 2023 Grade Period 4 Week 7 - Door Inspections
0 of 112 doors inspected this week.

Entry 1 - Door A
Last Inspected: ...
INSPECT

Entry 1 - Door B
Last Inspected: ...
INSPECT

Entry 2 - Door A
Last Inspected: ...
INSPECT

Entry 3 - Door A
Last Inspected: ...
INSPECT

Entry 3 - Door B
Last Inspected: ...
INSPECT

GARLAND HIGH SCHOOL

Inspect Entry 1 Door A

Is Door Secured?
 Yes No

SAVE NEXT DOOR RESET

Campus privileges

One advantage that David's app has is that we can parse the CampusID through the URL to restrict users to only be able to inspect doors at campuses they have been given access to.

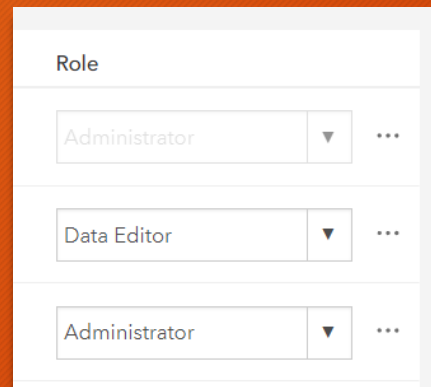

This meant that work needed to be done setting up privileges.

User Types, Roles, and Privileges

Assigned User Type

Controls the scope of privileges that can be assigned to the member through a role.

Roles

Type of work that members perform in the organization.

Privileges

Assigned to a role to grant specific rights to members. They control what a member can or cannot do in the organization.

<https://doc.arcgis.com/en/arcgis-online/administer/roles.htm>

Groups were set up for each campus

- ✓ Define Group's Purpose
- ✓ Set Up Group
- ✓ Add Members
- ✓ Share Items

Get started creating groups

1 Define group's purpose

2 Set up group

Credit:
<https://doc.arcgis.com/en/arcgis-online/get-started/get-started-with-groups.htm>

Data was shared to groups

Webmap, layers and individual campus URL was added to each group.

The image displays seven ArcGIS webmap thumbnails arranged in a 2x4 grid (with the last cell empty). Each thumbnail includes a title, author, creation and update dates, view count, and sharing options. The thumbnails are:

- Door Inspections 3**: by JWWalker@GISD, Created: Jan 3, 2023, Updated: Mar 3, 2023, View Count: 1,048. Thumbnail shows a world map.
- DoorInspCampusStatus**: by JWWalker@GISD, Created: Feb 28, 2023, Updated: Mar 2, 2023, View Count: 823. Thumbnail shows a white background with red squares.
- 008 Door Inspections**: by olesonr@GISD, Created: Feb 10, 2023, Updated: Feb 10, 2023, View Count: 0. Thumbnail shows a stick figure between two doors, one with a green checkmark and one with a red X.
- DoorInspect14**: by JWWalker@GISD, Created: Sep 28, 2022, Updated: Apr 10, 2023, View Count: 854. Thumbnail shows an aerial view of a campus.
- DoorInspect14**: by JWWalker@GISD, Created: Sep 28, 2022, Updated: Apr 10, 2023, View Count: 3,882. Thumbnail shows an aerial view of a campus.
- DoorInspectionChecksCurre...**: by JWWalker@GISD, Created: Nov 2, 2022, Updated: Dec 15, 2022, View Count: 1,241. Thumbnail shows a green checkmark.
- FLOORS**: by JWWalker@GISD, Created: Oct 16, 2020, Updated: Oct 16, 2020, View Count: 1,817. Thumbnail shows a black silhouette of a floor plan.

Users were added to their groups

Security provided a list of administrators from each campus who needed access to the app.

A separate list of security officers and SRO's were given access to do inspections for all schools.

Group pages were set up for each school.

The image displays a grid of ten group pages, each representing a different school or administrative function. Each page includes the school name, the number of inspections, and the user's email address. The pages are arranged in two rows of five.

School/Function	Inspections	User Email
155 ARMSTRONG ES	155	olesonr@GISD
156 PEARSON ES	156	olesonr@GISD
157 COUCH ES	157	olesonr@GISD

App instructions were sent to the schools

Garland ISD Campus door inspection app instructions

3/3/2023

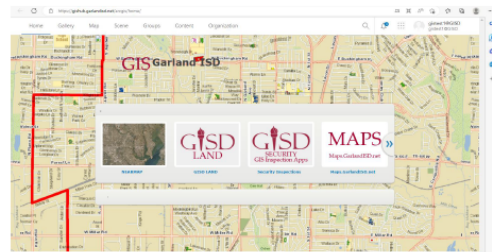

Security and GIS have set up a campus door inspection app on our GIS app portal.

The GIS portal can be accessed from the Staff apps directory on your GISD desktop.

Or you can go to this web page from a district computer. <https://gishub.garlandisd.net/arcgis/home/>

On the GIS Portal home page, you will see a ribbon of app tiles.

The apps on your page may be different if you have been given access to other GIS applications.

You can scroll through the apps available to you with the blue arrow on the edge of the app ribbon.

Find and click on the security inspections tile.

On the next page you will see a list of GISD campuses.

Click on your school.

On the page for your school you should see a door inspection link that looks like this.

If you do not see the link icon contact GISD-GISMaps@GarlandISD.net and request access

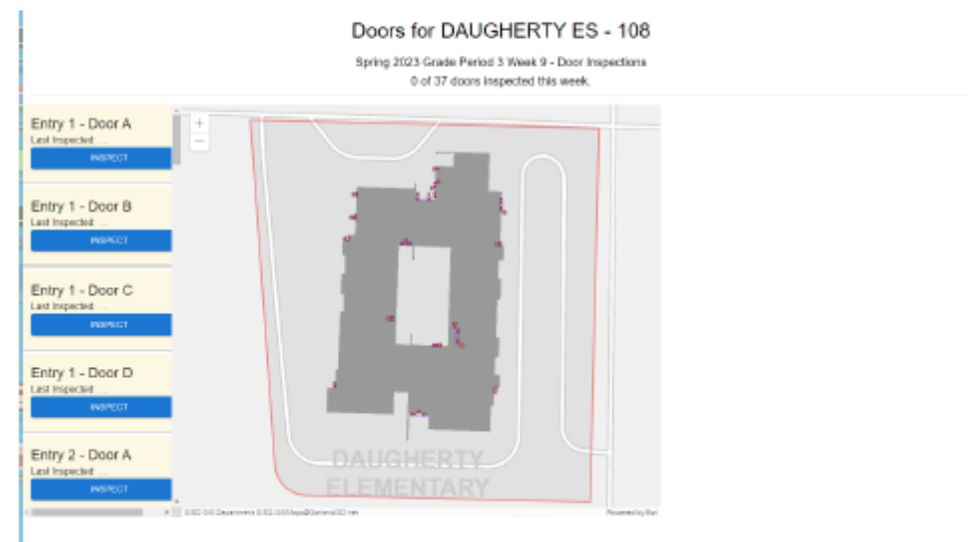

At the top of the inspection app you will see your schools name, the week and the door and inspection count for the week.

Below that the page is divided into three panels,

Left is a list of doors that can be inspected.

Center is an interactive map showing the doors.

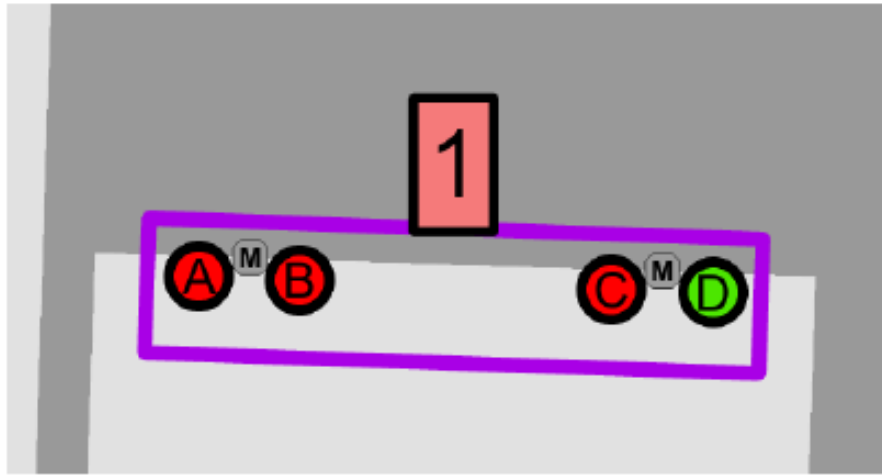

Right is a blank space where the door inspections will be completed when you select a door.

App instructions were sent to the schools

On the map you can zoom in and see the doors.

Below we have entry #1 which has 4 individual doors A, B, C, and D. We can also see that Mullions exist between A-B and C-D.

Doors for DAUGHERTY ES - 108

Spring 2023 Grade Period 3 Week 8 - Door Inspections
0 of 57 doors inspected this week.

Doors for DAUGHERTY ES - 108

Spring 2023 Grade Period 3 Week 9 - Door Inspections
36 of 37 doors inspected this week.

Check boxes in the web map and summary data by week leverage the SQL views.

Inspected doors will also show small check marks on the map.

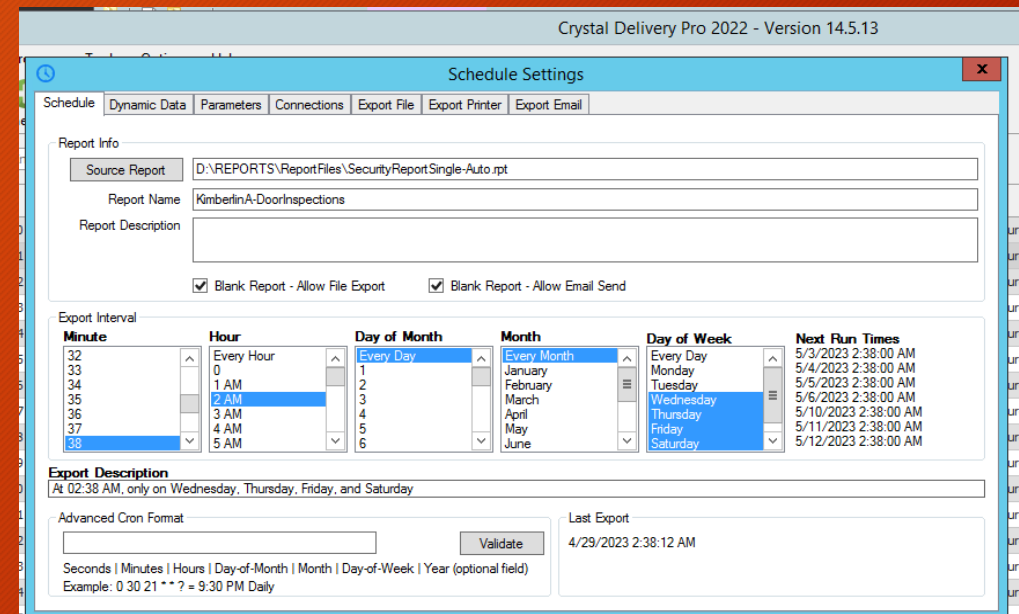

Reporting was the next step

For this we reached out to New Edge Services.

We worked with Robbie Schermerhorn to design and build reports in Crystal Reports.

Robbie implemented a tool called Crystal Delivery Pro.

<https://www.newedgeservices.com/>

Each campus gets a detail report Wednesday through Friday and a final weeks report is generated Saturday morning

Security requested a dashboard

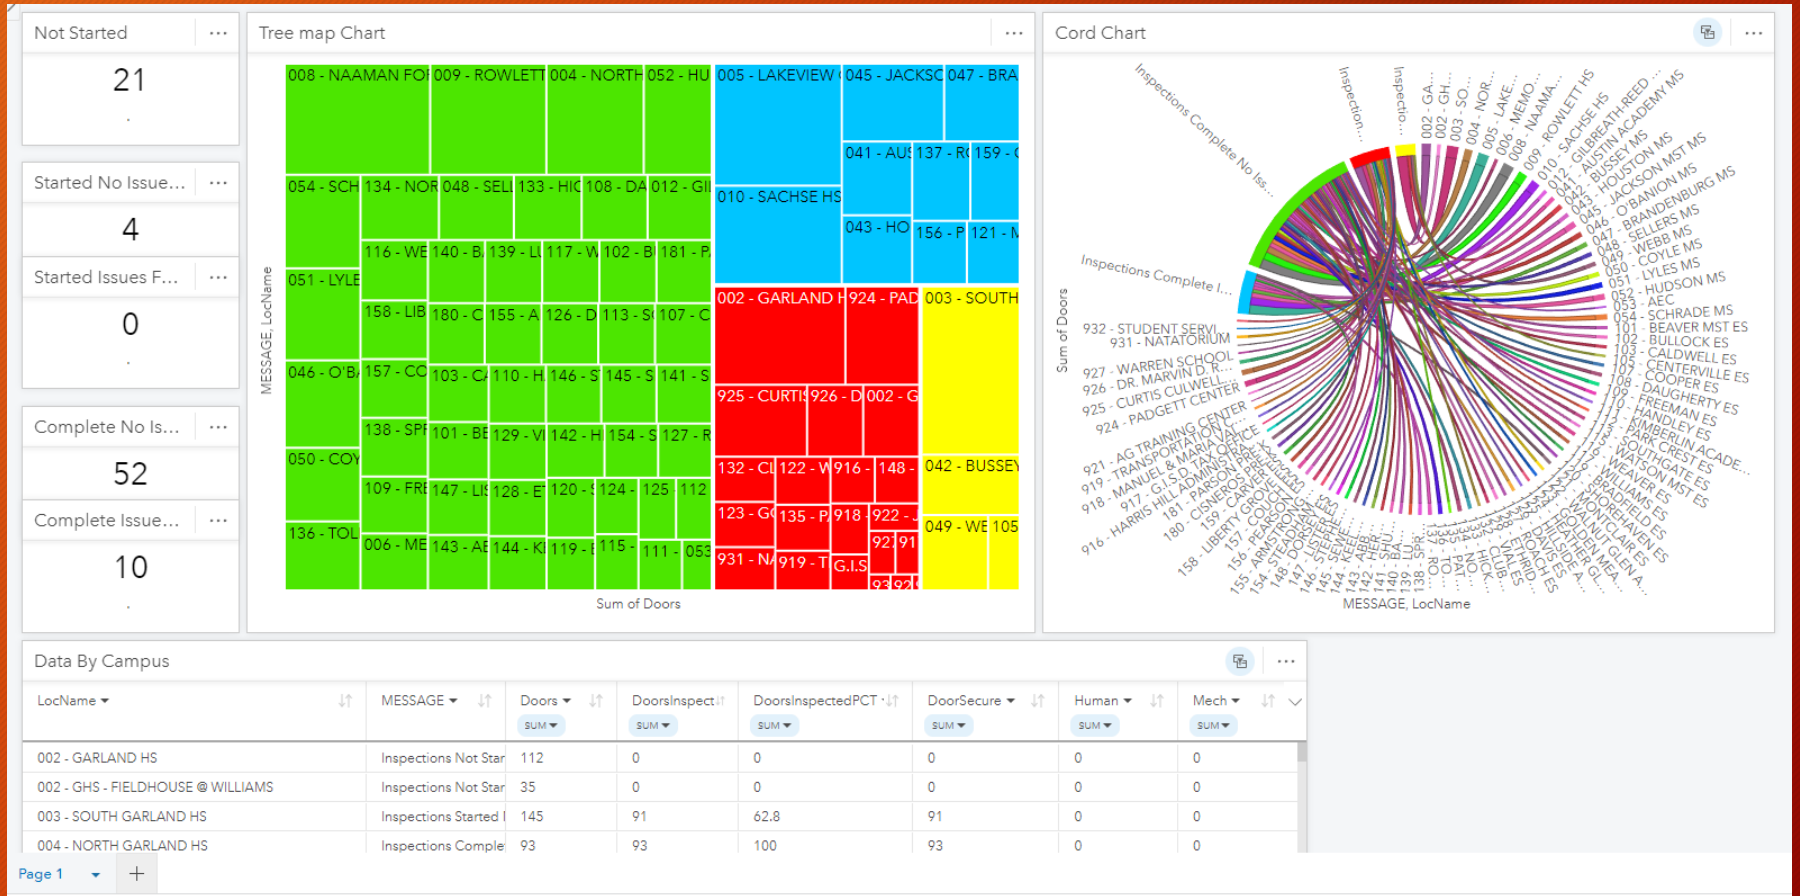

We used ArcGIS Insights to give Security the real time status of campus by campus door inspections.

Security requested a dashboard

Color coding in the Tree Map Chart and Cord Chart changes as inspections are done.

- Red = No inspections
- Orange = Inspections started and problems found
- Yellow = inspections started no problems
- Green is inspections complete no problems
- Blue = inspections complete with problems
