<b>TOTAL Ozone Action Days</b>	<b>0</b>
--------------------------------	----------

Ozone Action Day = Air Quality Forecasting suggests a high possibility of exceeding the ozone standard of 70 parts per billion for an eight-hour average.

## Key to Ozone Highlight Colors

Values in the ozone tables are color-coded to match the ozone warning levels described on the Ozone Warning Status web page. Ozone levels have been mapped to colors based on a projected eight-hour average calculated from the measured one-hour levels.

### **Measured values range from 55 to 70 ppb.**

Ozone levels in this range are considered moderate.

- Unusually sensitive people, such as those with asthma, should consider limiting prolonged outdoor activity.

### **Measured values range from 71 to 85 ppb.**

Ozone levels in this range are projected to be unhealthy for sensitive groups based on the eight-hour AQI standard for ozone.

- Active children and adults as well as people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.

### **Measured values range from 86 to 105 ppb.**

Ozone levels in this range are projected to be unhealthy based on the eight-hour AQI standard for ozone.

- Everyone, especially children, should limit prolonged outdoor exertion.
- People with respiratory disease, such as asthma, should avoid prolonged outdoor exertion.

### **Measured values range from 106 to 200 ppb.**

Ozone levels in this range are projected to be very unhealthy based on the eight-hour AQI standard for ozone.

- Everyone, especially children, should limit outdoor exertion.
- People with respiratory disease, such as asthma, should avoid all outdoor exertion and limit exposure by staying inside (air conditioned spaces are best).
