

Quantity Verification Sheet System Training

QV Sheets is a web-based platform used by the City of Dallas PBW department to manage and track projects.

QV sheets in helping to visualize the project status, effective communication for project parties, maximize operational and financial performance, all while reducing schedule, budget & quality risks.

Qv sheet benefits:

❖ Contract management

Fund/Bonds source, invoicing, compliance alerts, organize data, quick and safe access to data, cloud saved data.

❖ Project management.

Quality control, budget control, time control, issues control, tracking project milestones & activities, review and approve process for QV sheets and bid items, improve the communication between project main parties (vendor, inspector, supervisor and project manager).

Inspector responsibilities

- Prepare and submit detailed daily reports.
- Register issues in the QV sys. Identify issues, assess level of impact, update & monitor the progress, close it out.
- Review and approve/reject QV sheets that submitted by the Vendors.
- Monitor bid items quantity and make sure no overrun unless approved by supervisor or PM.
- Taking a photographs of the construction projects and upload them to the QV sys.

Prepare and submit detailed daily reports.

The screenshot shows the QV Sheets application interface. The top navigation bar includes the logo, the current project name 'COOMBS CREEK TRAIL EXTEN...', a search bar, and the user's name 'Haider Al Nassar'. The left sidebar contains a navigation menu with sections for 'City of Dallas - CIP', 'Dailies', 'QVs', and 'Projects'. The 'Dailies' section is expanded to show 'Draft', 'Review', and 'Closed'. The 'Draft' option is highlighted. The main content area is titled 'Dailies - Draft' and contains a table with columns for 'Date' and 'Contract'. An 'Add Report' button is located above the table. Three callout boxes provide instructions: 1- Click the drop-down menu to choose the project. 2- Click on Draft to prepare the daily reports. 3- Click on Add Report to create your report.

1- Click the drop-down menu to choose the project.

2- Click on Draft to prepare the daily reports.

3- Click on Add Report to create your report.

It's the inspector responsibility to prepare and submit daily reports of all his/her assigned projects. Reports need to have details about the work progress and daily project activities.

Daily reports will move to review section after submitted by the inspector, waiting for supervisor review.

Daily reports will move to closed section after approved by supervisor. All daily reports will be saved in this section.

Register issues in the QV sys.

An issue is anything that hinders the progress of the project. It could be a conflict, inconsistency, or any problem that impact the project. Having an issue log is important because it ensures team members properly document any challenges, they may face during a project's life cycle. It also helps upper management team to track the resolution process to ensure they overcome each challenge quickly and effectively. Using an issue log can benefit by:

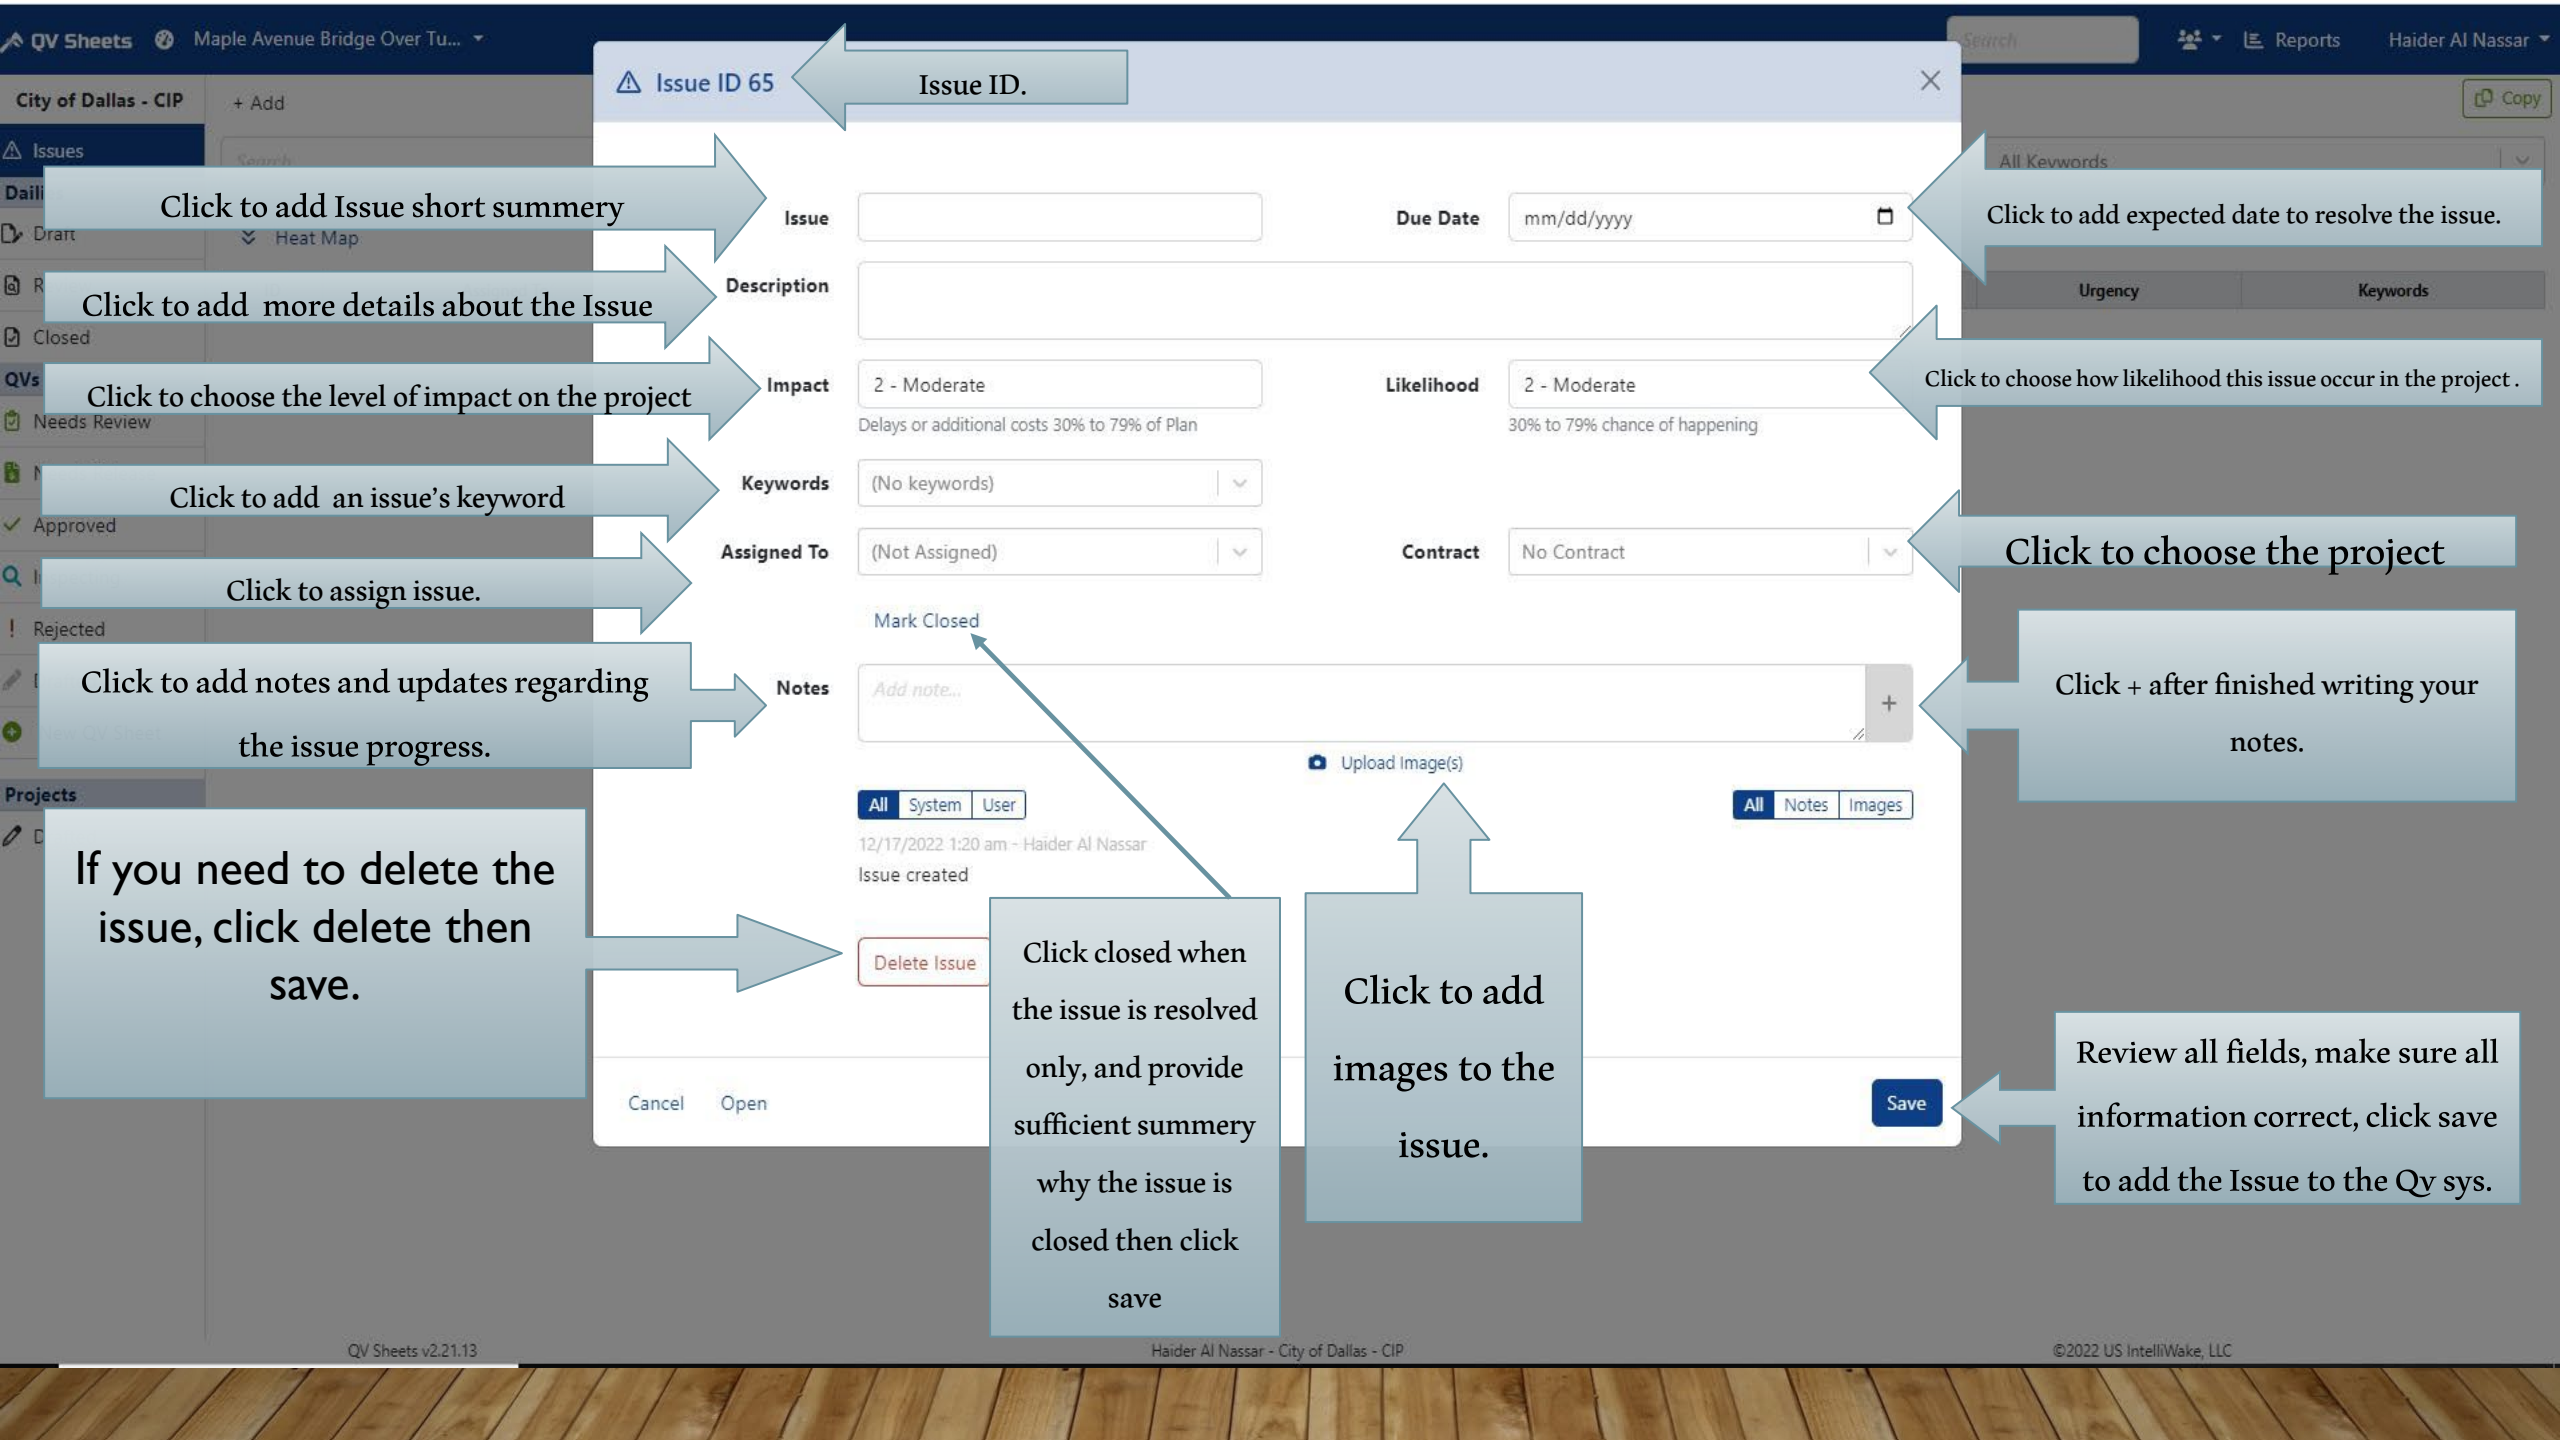

- Improve communication between team members.
- Developing proactive problem-solving practices.
- Saving time and increasing productivity.
- Helps to stay within budget & meet deadlines.
- Improve the quality of the work.

Inspector is responsible to register all issues that take place in the project execution. Inspector is responsible to identify, assess level of impact, provide all required information, monitor/update the status and close it out.

In some cases, supervisor may register the issues and provides all required updates.

Register issues in the QV sys.

The screenshot shows the 'QV Sheets' web application interface. The top navigation bar includes the 'QV Sheets' logo, the current project name 'Maple Avenue Bridge Over Tu...', a search bar, and user information 'Haider Al Nassar'. The left sidebar contains a navigation menu with categories: 'City of Dallas - CIP', 'Issues', 'Dailies', 'Draft', 'Review', 'Closed', 'QVs', and 'Projects'. The 'Issues' category is selected. The main content area displays the 'Issues' page for the project 'Maple Avenue Bridge Over Turtle Creek Bridge Repair'. It features a '+ Add' button, a search bar, a status filter 'Open', and a dropdown menu for 'All Assig...'. Below this is a 'Heat Map' toggle and a table with columns: 'ID', 'Assignee', 'Due Date', 'Likelihood', 'Urgency', and 'Keywords'. Three callout boxes provide instructions: '1- Click the drop-down menu to choose the project.' points to the 'All Assig...' dropdown; '2- Click Issues.' points to the 'Issues' menu item in the sidebar; and '3- Click Add to create new issue.' points to the '+ Add' button.

Inspection Notes

➤ Taking a photographs of the construction projects.

Whether it's stunning professional shots of the completed project or pictures of specific in-progress work taken by the Inspector, pictures can convey a lot of useful information. As they say, a picture is worth a thousand words. Certainly, the right photograph could literally be worth a million dollars if it can prove a damage claim.

In-progress photos can create a record of how work is progressing on the site, as well as a reference for future upgrades, additions, or repairs.

Photos are important to record issues on the project, such as poor-quality work, lack of safety compliance provide a record that can be sent to their management.

Inspector can upload photos to:

- Daily reports (refer to slide #7)
- Issues report (refer to slide #12)
- Qy sheet approval (refer to slide #15)

Web-based software to unlock next-level efficiency and
REVOLUTIONIZE CONSTRUCTION VERIFICATIONS!

Time Efficiency

- Reduce time organizing documentation
- Auto-generate pay apps every period
- Team focuses on quality, not bureaucracy

Web-based software to unlock next-level efficiency and
