1. **Welcome and Introductions.**

DISCUSSION/PRESENTATION/ACTION ITEMS

2. **Meeting Summary Approval.** The February 21, 2025, meeting summary is [available online](#) for review.
3. **Trinity-San Jacinto River Basin Selected as Regional Integrated Water Science (IWS) Basin.** The U.S. Geological Survey selected the Trinity-San Jacinto River Basin (TSJRB) as the fifth regional Integrated Water Science (IWS) basin due to its potential impacts from future extreme hydroclimatic events and expanding urbanization on urban flooding. The basin includes two large urban metropolitan areas, Dallas-Fort Worth and Houston, with a combined population of over 15 million that experience differential impacts across communities in terms of resiliency and vulnerability to flooding. To better understand how these impacts are currently distributed and are predicted to be distributed in the future, the TSJRB Integrated Water Availability Assessment (one part of the IWS basin study) phase 1 assessment will be aimed at understanding the hydrologic landscape of the river network with an overarching goal to predict and understand future flood risk, in particular the urban flooding impacts from land cover change and climate variability. (Erik Smith, USGS)
