# WHAT IS A GREASE INTERCEPTOR?

- A grease trap is a plumbing device (a type of trap) designed to intercept most greases and solids before they enter a wastewater disposal system.
- A grease trap works by slowing down the flow of warm/hot greasy water and allowing it to cool. As the water cools, the grease and oil in the water separate out and float to the top of the trap. The cooler water - minus the grease - continues to flow down the pipe to the sewer.

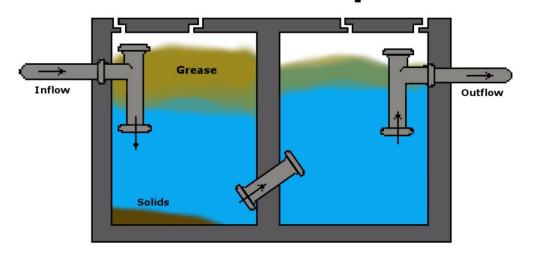

### GREASE TRAP TYPES

# GREASE TRAP TYPES

Gravity Interceptor

Grease Trap

Hydromechanical Interceptor

# CITY OF IRVING REQUIREMENTS

- 500-gallon minimum requirements
- Traps to be located on the exterior of the establishment
- Maintain collection devices(repairs and servicing)
- Minimum cleaning frequency of 90 days
- 25% Rule

1 1/4"

# FATS, OIL, AND GREASE PROGRAM

- Educate City of Irving residents on the importance of proper waste disposal to mitigate increasing wastewater treatment costs, and sanitary sewer overflows.
- Educate businesses on the importance of maintaining their grease traps/interceptors.
- Implement enforcement to insure high quality of life for residents, businesses and visitors.
