CURB EXTENSIONSBULB OUTSDPS 201NECKDOWNS

STREETFILMS

WHEN & WHERE

When

Limited Sight Distance

- Pedestrians & Vehicles
- Vehicles and Signs
- Want to put two curb ramps in
- Discourage High speed turning
- High number of pedestrians waiting on corner

Where

- Wherever there is 24/7 on street parking
 - Intersections
 - Midblock

BETTER VISIBILITY

BETTER TO SEE YOU WITH

Pedestrians wait where they can see - in front of parked cars

Curb extension places pedestrian where they can see and be seen Salem OR

5-5

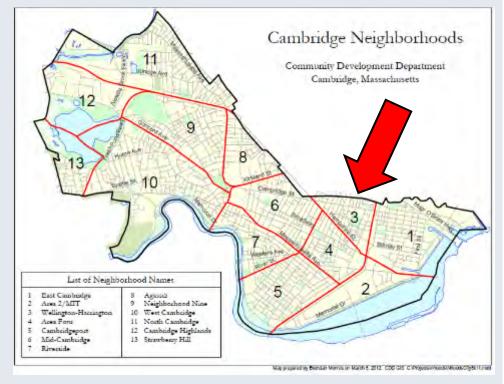

Problem

- High motorist high speeds on Berkshire Street
- Failure to obey STOP signs
- Pedestrian activity (especially children)
- Popular motorist cut-through
- High number of pedestrian collisions

Background

- Residential area with mix of businesses and retail shops
- Residents had longcomplained about speeding and disregarding STOP signs
- Police data confirm the problem

Solution

- Curb extensions installed as part of a traffic calming effort
 - 3 intersections
- Other improvements included:
 - Raised crosswalks/intersections
 - Chicanes
 - Restriping crosswalks
 - Altering pedestrian park access points
- Done in three phases total cost \$8,236,516
 - 20% local, 80% state/federal

Curb extension at Berkshire and Plymouth Streets

Motorist view of the curb extension at Berkshire and Plymouth Streets

Results

- Curb extensions reduced the crossing distance, limited exposure time, improved visibility, & slowed turning vehicles
- Survey found 44% liked the changes, 28% did not
- 47% felt pedestrian safety improved
- 61% said it was more difficult to find parking (despite net loss of 1 on-street space)

Curb Extension at Berkshire St & York St

CURB EXTENSIONS/BULB OUTS - SAFETY

NO CMF's/CRF's

- Curb extensions contribute to increased pedestrian safety by:
 - Increasing pedestrian visibility
 - Allows pedestrians to better observe approaching motorists
 - Decreasing crossing distance
 - Reducing pedestrian exposure to traffic
 - Can reduce speeds by visually narrowing the street
 - Slows turning vehicles
 - Can improve signal timing / may reduce cycle length

SAFETY RESEARCH

- PEDESTRIAN SAFETY IMPACTS OF CURB EXTENSIONS: A CASE STUDY Final Report SPR 304- 321
 - https://nacto.org/docs/usdg/pedestrian_safety_impacts_of_curb_extensions_randal.p df
- Doesn't include CRF but covers yielding rates

Safety Performance

- By reducing the pedestrian crossing distance and exposure of pedestrians to traffic, this treatment should reduce the frequency of pedestrian collisions. A New York City study suggested that curb extensions appear to be associated with lower frequencies and severities of pedestrian collisions.⁽¹⁰²⁾ Curb extensions should also reduce speeds on approaches where they are applied.

 - Washington, DC: TRB, NRC, December 2000.

BENEFITS & LIABILITIES

Signalized Intersections: Informational Guide

Signalized Intersections Informational Guide

Second Edition

FHWA Safety Program

2

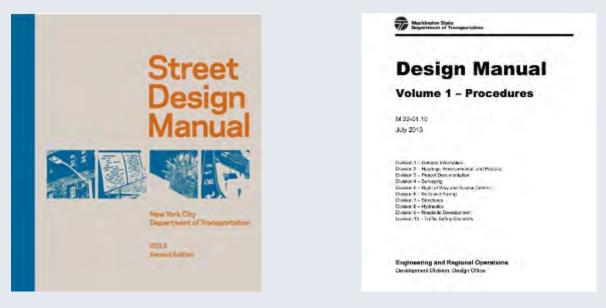

Exhibit 9-4 provides a summary of the issues associated with curb extensions.

Characteristic	Potential Benefits	Potential Concerns			
Safety	Reduction in right-turning vehicle/pedestrian collisions. Fewer right-turn-on-red violations.	May increase right-turning/through vehicle rear-end collisions due to increased speed differential. Large vehicle off-tracking.			
		cage venice of aboung.			
Operations	Less overall delay due to reduction in time needed to serve pedestrian movement.	May adversely affect operation if curb extension replaces a travel lane. Right-turn movements delayed.			
		Emergency vehicles may be significantly delayed.			
Multimodal	Shorter crossing distance. Facilitates the use of two perpendicular ramps rather than a single diagonal ramp.	May be more difficult for large trucks and buses to turn right.			
	Better visibility between pedestrians and drivers.				
Physical	None identified.	Drainage may be adversely affected.			
Socioeconomic	Low to moderate costs.	None identified.			
Enforcement, Education, and Maintenance	None identified.	None identified.			

DESIGN GUIDANCE

Chapter 2 - Geometry

Chapter 1510 – Pedestrian Facilities

DESIGN GUIDANCE

Washington State DOT Design Manual

- Extend the curb no farther than the width of the parking lane.
- Design the approach nose to ensure adequate setback of vehicles to provide visibility of pedestrians.
- At traffic signals curb extensions can be used to reduce pedestrian signal timing (less crossing distance).

WHEN NOT TO USE

Washington State DOT Design Manual

- Do not use curb extensions on State highways when:
 - The design vehicle encroaches on curbs or opposing lanes
 - On-street parking is not provided/allowed.
 - The posted speed is above 35 mph.

CURB EXTENSIONS ON ONE SIDE OF INTERSECTION

- Use Caution: Drivers that may run through the right turn lane on one side will hit the curb extension
- Bollards installed to help alleviate the situation

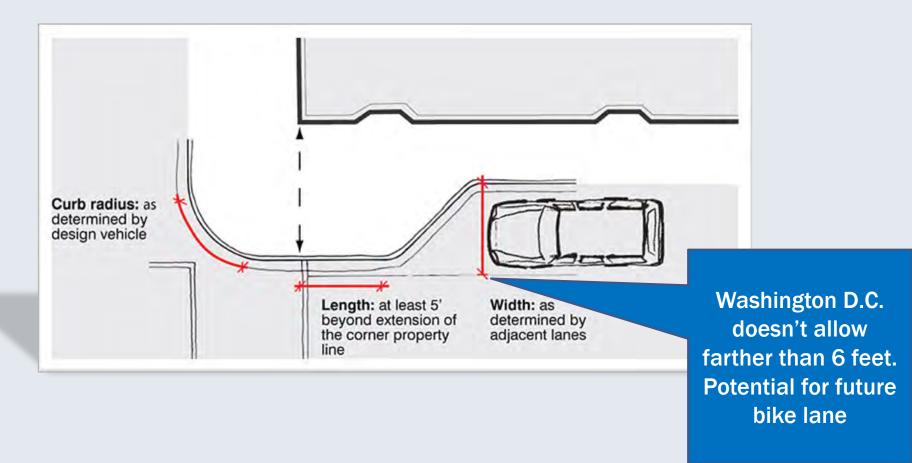

DIMENSIONS NYC STREET DESIGN MANUAL

- Width is typically 2 feet less than width of parking lane
 - Curb extension can extend to (not into) bicycle lane
- Minimum curb extension length typically equal to full width of the crosswalk

DIMENSIONS SAN FRANCISCO BETTER STREETS

Typical Bulb-Out Dimensions

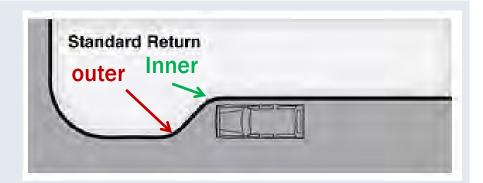

RADII SAN FRANCISCO BETTER STREETS

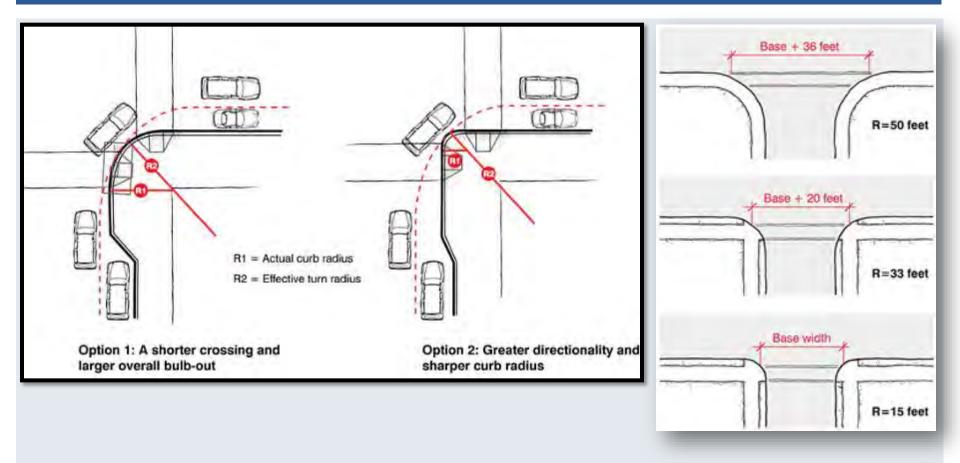

Standard return: inner/outer curb

radius of 20ft & 10ft

- Enable street sweeping machines to sweep the entire curb line
- May be reduced to 15ft and 10ft to

RADII SAN FRANCISCO BETTER STREETS

BUS BULB OUT

DRAINAGE

- Must design to maintain storm water drainage & prevent ponding
- Options:
 - Relocate catch basins
 - Channel water through, around, or in-between
 - Bioswales

DRAINAGE/TRENCH DRAINS

- Trench Drain considered to reduce cost & implementation
- Proper proportion trench drain to sidewalk
 - Left picture, smaller drain, attractive and proportioned
 - Right picture, wide drain, visually too dominant

MID-BLOCK CONSIDERATIONS

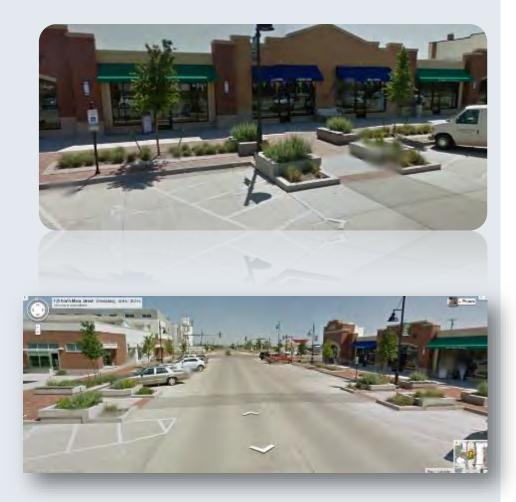

- Include bollards, landscaping, or other buffers between pedestrians & vehicles
- Buffer treatment height, width, & design <u>must not</u> impede a driver's view of pedestrians
- Use special paving or edging treatment to distinguish the ped plaza from the travel lane
- Street lighting at choker

MID-BLOCK CONSIDERATIONS

Street furnishings & other objects may be located on curb extensions to provide more ped space on sidewalk

Should be used at designated midblock crossings

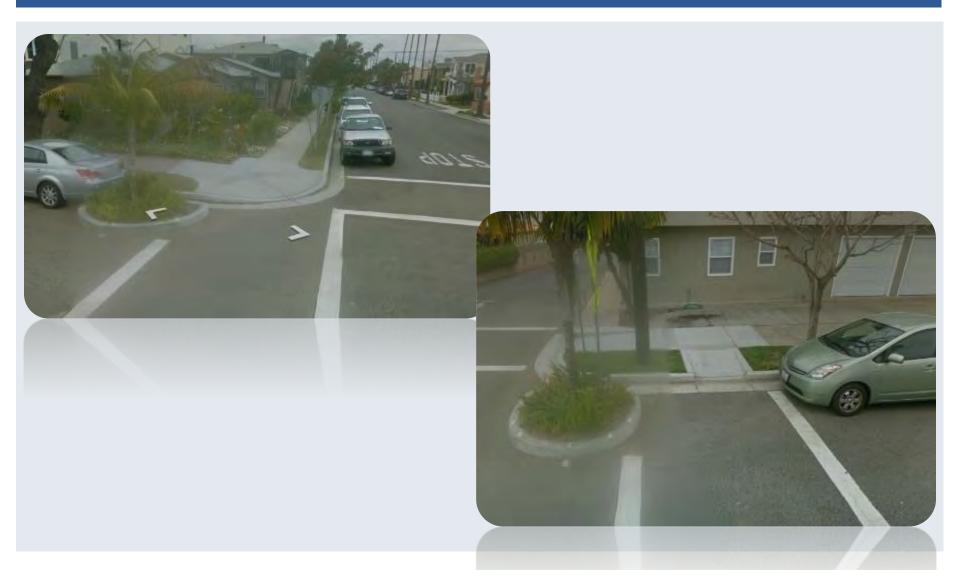

ADA TREATMENTS WHAT IS GOOD & NOT COMPLIANT?

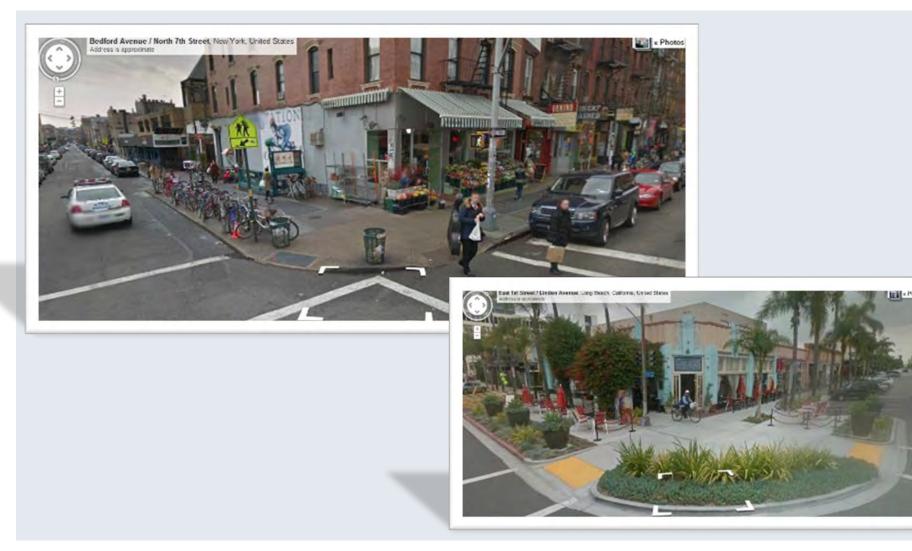

http://www.sauerburger.org/dona/crosscreditlist.html

SITE FEATURES GOOD OR BAD DESIGN?

FIXED OBJECTS

Warren & Smith Streets, Brooklyn DOT

Bollards, planters, & other fixed objects may be placed at the back of curb to protect pedestrians and prevent vehicles from driving onto the sidewalk.

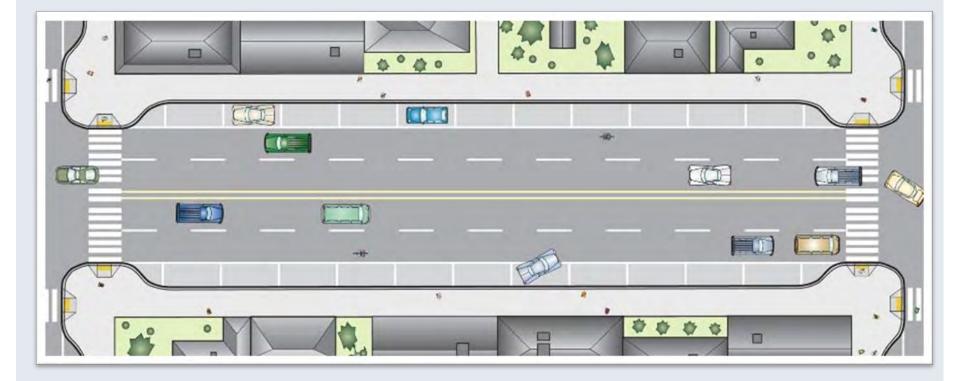

SIGHTLINES NYC STREET DESIGN MANUAL

- Provide open sight-lines to the crossing for approaching motorists
- The design and placement of street furniture, trees, and plantings on a curb extension must not impede pedestrian flow, obstruct a clear path, interfere with "daylighting" the crossing, or emergency operations.

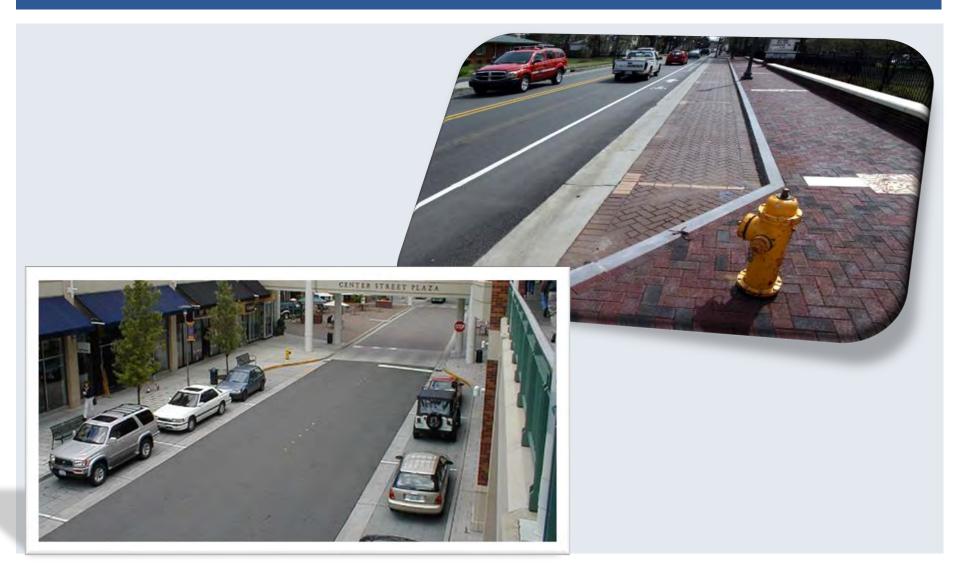

PARKING INTEGRATED WITH SIDEWALK

Paving on curb extension should match the surrounding sidewalks

PARKING INTEGRATED WITH SIDEWALK

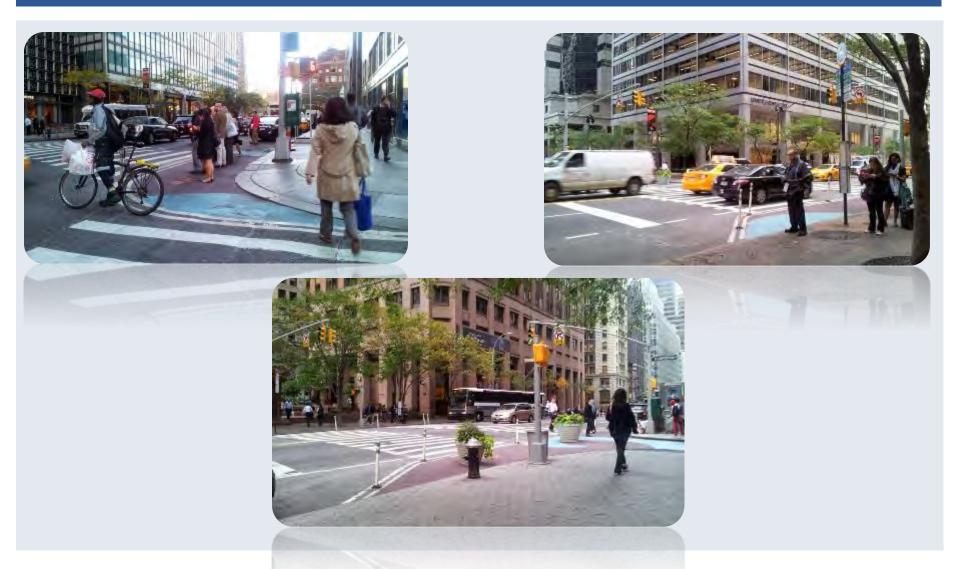

MAINTENANCE

Street sweepers – Planters and abrupt corners require hand-sweeping

PAINT & DELINEATOR POSTS

TEMPORARY TO PERMANENT

CURB EXTENSIONS/BULB OUTS -COST (2013)

Infrastructure	Description	Median	Average	Minimum	Maximum	Cost Unit	No. of Observations
	Curb						
	Extension,						
	Choker, or						
Curb Extension	Bulb-Out	\$10,150	\$13,000	\$1,070	\$41,170	Each	19 (28)
