Parklet Construction Drawings

These construction documents are provided for open-source use to create a modular parklet with bicycle parking and / or seating components with self-watering planter boxes and a shade awning.*

The project is courtesy of the North Central Texas Council of Governments, Blue Green Grey Grant and was designed by Amanda Popken Development along with the design team at DSGN Design, TBG Partners, and constructed by Stash Design and STARTS Permaculture.

Modules may be combined in any order. Each is interlocking and interchangeable.

The plans include a module with a shorter planter box to accommodate a visibility triangle at a street corner, and a shade component within the larger planter boxes.

Longer benches may serve as seating for outdoor dining tables placed between.

Contact Amanda Popken with any questions about these drawings, best practices for parklets and municipal policy on parklet installation: ap@amandapopken.com

* Note: Check with the municipality where you plan to install your parklet to ensure it complies with any local ordinances governing the design or placement of a parklet, whether on private land or public right of way.

See this parklet at Veracruz Cafe in the Bishop Arts District, Dallas Tx

Planter 35"
Long Seat
With Shade holder

Note:
- Composite width changed to 5-1/2" with 1/4" gap between them.
- 3/8" Side angles changed to 1/2" angle.
- Bicycle Lock place replaced with bended 1/4" Sq Bar
- PVC Pipe and Adapter Fitting added to the Planter
- Planters dimension adjusted.
- 3" Angle added to curve side.
- Total Composites width is: 22-3/4"
- Total width is: 23-3/4" including 1/2" Angles

Planter Box Detail

Foam insulation and plastic liner will protect plant roots from intense heat and cold. Place root barrier fabric atop the plastic and pipe to keep dirt and roots separate from water reservoir.

Watering plants through the copper mouth allows water to pool in the joint reservoir and wick up to plants in upper planter.

Note the slit on the side of each planter box to allow excess rainwater to drain.

Fill planters with potting soil and plant native flowers.
