ACCESS NORTH TEXAS

REGIONAL PUBLIC TRANSPORTATION PLAN
FOR NORTH CENTRAL TEXAS

Prepared by the North Central Texas Council of Governments

Final March 2018
What is NCTCOG?

The North Central Texas Council of Governments is a voluntary association of cities, counties, school districts, and special districts which was established in January 1966 to assist local governments in planning for common needs, cooperating for mutual benefit, and coordinating for sound regional development.

It serves a 16-county metropolitan region centered around the two urban centers of Dallas and Fort Worth. Currently the Council has 236 members, including 16 counties, 168 cities, 24 independent school districts, and 28 special districts. The area of the region is approximately 12,800 square miles, which is larger than nine states, and the population of the region is about 7 million which is larger than 38 states.

NCTCOG’s structure is relatively simple; each member government appoints a voting representative from the governing body. These voting representatives make up the General Assembly which annually elects a 17-member Executive Board. The Executive Board is supported by policy development, technical advisory, and study committees, as well as a professional staff of 350.

NCTCOG's offices are located in Arlington in the Centerpoint Two Building at 616 Six Flags Drive (approximately one-half mile south of the main entrance to Six Flags Over Texas).

NCTCOG’s Department of Transportation

Since 1974 NCTCOG has served as the Metropolitan Planning Organization (MPO) for transportation for the Dallas-Fort Worth area. NCTCOG’s Department of Transportation is responsible for the regional planning process for all modes of transportation. The department provides technical support and staff assistance to the Regional Transportation Council and its technical committees, which compose the MPO policy-making structure. In addition, the department provides technical assistance to the local governments of North Central Texas in planning, coordinating, and implementing transportation decisions.

Prepared in cooperation with the Texas Department of Transportation and the U. S. Department of Transportation, Federal Highway Administration, and Federal Transit Administration.

“The contents of this report reflect the views of the authors who are responsible for the opinions, findings, and conclusions presented herein. The contents do not necessarily reflect the views or policies of the Federal Highway Administration, the Federal Transit Administration, or the Texas Department of Transportation.”

RESOLUTION ENDORSING ACCESS NORTH TEXAS, THE COORDINATED PUBLIC TRANSIT-HUMAN SERVICES TRANSPORTATION PLAN FOR NORTH CENTRAL TEXAS

WHEREAS, the North Central Texas Council of Governments (NCTCOG) is a Texas political subdivision and non-profit corporation organized and operating under Texas Local Government Code Chapter 391 as the regional planning commission for the 16-county North Central Texas region; and,

WHEREAS, NCTCOG is a voluntary association of, by and for local governments established to assist in planning for common needs, cooperating for mutual benefit, and coordinating for sound regional development; and,

WHEREAS, NCTCOG has been designated as the Metropolitan Planning Organization (MPO) for the Dallas-Fort Worth Metropolitan Area by the Governor of the State of Texas in accordance with federal law; and,

WHEREAS, the Regional Transportation Council (RTC), comprised primarily of local elected officials, is the regional transportation policy body associated with NCTCOG, and has been and continues to be a forum for cooperative decisions on transportation; and,

WHEREAS, federal law, the Fixing America’s Surface Transportation (FAST) Act, requires the establishment of a locally developed, coordinated public transit-human services transportation plan for agencies seeking funding under the Enhanced Mobility of Seniors and Individuals with Disabilities Program; and,

WHEREAS, Chapter 461 of the Texas Transportation Code requires the development of a regional plan to coordinate public transportation services funded with federal, state, or local funds; and,

WHEREAS, the North Central Texas Council of Governments was designated as the lead agency to develop the coordinated public transit-human services transportation plan for the 16-county North Central Texas region; and,

WHEREAS, Subtask 3.05 of the FY2018 and FY2019 Unified Planning Work Program includes public transportation planning and management activities; and,

WHEREAS, Access North Texas was locally developed and approved through a process that included participation by seniors, individuals with disabilities, representatives of public, private, and nonprofit transportation and human services providers and other members of the public; and,

WHEREAS, Access North Texas was approved by the Regional Transportation Council on March 8, 2018.

NOW, THEREFORE, BE IT HEREBY RESOLVED THAT:

Section 1. The North Central Texas Council of Governments Executive Board endorses Access North Texas.

Section 2. This resolution will be included in the final documentation of Access North Texas.
Section 3. Access North Texas will be transmitted to the Texas Department of Transportation and other impacted agencies.

Section 4. This resolution shall be in effect immediately upon its adoption.

Tom Lombard, President
North Central Texas Council of Governments
Councilmember, City of North Richland Hills

I hereby certify that this resolution was adopted by the Executive Board of the North Central Texas Council of Governments on March 22, 2018.

J.D. Clark, Secretary-Treasurer
North Central Texas Council of Governments
County Judge, Wise County

EXECUTIVE SUMMARY

INTRODUCTION
Access North Texas is the public transit-human services transportation coordination plan for the 16 counties served by the North Central Texas Council of Governments (NCTCOG). Access North Texas identifies the transportation needs of older adults, individuals with disabilities, and individuals with lower incomes. Based on a combination of research, technical analysis, and public input, the plan identifies strategies to better serve these vulnerable populations with public transportation. While the plan is not a funding document, it is used as a guide for agencies that provide transportation services when federal and State funding becomes available.

Older adults, individuals with disabilities, and individuals with lower incomes can have difficulty finding public transportation options that connect them to medical appointments, work opportunities and education or job training. This plan identifies where these transportation connections do not exist or could be improved in both the region as a whole as well as county-by-county.

NCTCOG is designated by the Texas Department of Transportation (TxDOT) to develop the plan, but works to ensure all voices are heard through the entirety of the planning process. NCTCOG is responsible for organizing public meetings, collecting data, performing research, and bringing that knowledge together to create a plan for the region.

CURRENT TRENDS
Recent public transportation trends influence the evolution of traditional transit services across the region. Transit providers are ground-testing ways to provide up-to-the-minute on-demand service, known as mobility on demand. In some areas, transit agencies are partnering with Transportation Network Companies (TNCs), such as Uber and Lyft, to provide last-mile connections to supplement bus and rail service. Increasingly, cities and agencies contact transit providers to discuss how to provide transportation tailored to their community’s particular needs and proactively work to improve available transit options. A significant factor in this trend is continuing intense economic growth in the Dallas-Fort Worth Metroplex that has spurred the need for additional transportation services to connect residents to job opportunities. Lastly, technology and new smartphone apps are making it easier for customers to access multiple transit providers from one convenient source.

Future trends will also shape how seniors, individuals with disabilities, and individuals with lower incomes use public transportation. Autonomous vehicles are currently being tested in the region and may become part of the transit system, changing the way last-mile and on-demand services are offered. Smartphone apps like GoPass (www.gopass.biz) will continue to integrate transit service information and make finding the right services and purchasing a fare convenient for riders. Future upgrades to this region-wide transit ticketing app will include more participating transit agencies and options for unbanked individuals to purchase tickets via local businesses that will accept cash. Lastly, TNCs are working to become more accessible for individuals with disabilities by improving components of their apps and increasing the number of accessible vehicles. These changes to the region’s transit system will positively impact people’s lives.
Access North Texas was first adopted in 2013. Significant progress has been made in implementing recommendations from that plan. Examples of outcomes from the 2013 plan are described below. See Appendix B-1, Access North Texas (2013): Summary and Status, for more information about which strategies have been accomplished since the plan was adopted.

**New Transit Service in Hutchins**

The 2013 plan identified the need for municipalities in south and southeast Dallas County to obtain service for underserved areas and populations. The city of Hutchins didn’t have any public transportation options, but residents needed to get around the community and FedEx needed to get their employees and drivers to their facility. STAR Transit was identified as a transit provider that could operate service to meet both FedEx and the city’s needs. The city and FedEx both contribute funds to help pay for the operation of the service. STAR Transit now operates two shuttles that connect Hutchins residents to DART’s light rail system, enable FedEx employees to get to the facility for early morning shifts, and enable residents to access local destinations such as grocery stores, schools, and medical facilities.

**Denton Community Health Council**

In Denton County, there was a need for a committee to focus on transportation needs to identify coordination opportunities and propose potential service changes. Texas Health Presbyterian Hospital Denton has a Community Health Council that meets quarterly with internal departments, community organizations, and stakeholders in order to improve the wellness of their patients and reduce unnecessary readmissions. Improving wellness includes access to their facility via public transportation, so a transportation subcommittee was created. This committee focuses on how to improve transit connections to care facilities. Two public transportation providers are actively involved, providing information about available transit services and assistance to organizations and patients as they apply for transit services. Additionally, the two transit agencies correspond on a regular basis to ensure they’re coordinating transit services when possible. This model of collaboration within the community and between transit providers makes discussing and developing transit solutions easier.

**Connecting Seniors to Medical Services**

In Ellis County, public outreach in Access North Texas identified the need to expand or introduce new transportation options that connect residents to Dallas for medical services. For seniors living in Ellis County, it can be difficult and expensive to reach medical appointments in Dallas. Senior Connect’s mission is to improve the quality of life for seniors and they partnered with STAR Transit to provide reduced-fare transportation for residents 60 and older (who don’t qualify for Medicaid) in Ellis County, Kaufman County, and Rockwall County that have medical appointments in Dallas. This program provides an affordable and essential link to medical care.

**Connecting Hunt County to Dallas Area Rapid Transit (DART)**

A regional transportation link from Hunt County to the Dallas-Fort Worth area was needed to improve access to medical appointments, job opportunities and other destinations. Senior Center Resources and Public Transit operates The Connection, which provides public transportation in Hunt County. In October 2016, The Connection began operating a new commuter route connecting Greenville to DART’s Downtown Rowlett Station, which is the terminus of the Blue Line in DART’s light rail system. The new service follows a regular schedule with an affordable fare, replacing an occasional and expensive previous service. Now, there’s a more affordable way for individuals to access medical appointments and job opportunities in the Dallas-Fort Worth area.

**Cooperative Vehicle Procurement**

Transportation providers within the 16-county region needed to increase the variety of vehicles in their fleet to better match vehicles to the service being provided.
In order to promote economies of scale that could benefit smaller transit providers, NCTCOG led a cooperative vehicle procurement in 2014 to obtain three different types of vehicles (small, medium, and light duty). In total, over 100 vehicles were procured for 9 different transit providers. This approach ensured federal procurement requirements were met, the vehicles were purchased at the best rate, and helped transit providers better match vehicle type to service provided. Pictured below is the Executive Director and Transportation Manager at Span Transit accepting one of their small duty vehicles.

**SPAN TRANSIT DELIVERY VEHICLE**

**CURRENT NEEDS**

The current plan update brought together many sources of information to identify current needs and describe strategies to meet those needs. Sources included demographic research, research on local conditions, a transportation poll for the public, outreach meetings, and consultation with regional stakeholders. All of the data (qualitative and quantitative) was used to evaluate the needs for public transportation in the 16-county region as a whole as well as for each county. The regional and county-specific strategies were developed based on all the data collected and described below.

U.S. Census data was collected and incorporated into a Transit Accessibility Improvement Tool (TAIT). This tool was created to identify where populations that may have a greater need for access to public transportation are located in the 16-county North Central Texas region. The TAIT allows users to locate potential transit-dependent populations based on demographic traits. Transit planners can use the tool as a preliminary indicator of where service should be evaluated and to identify potential gaps in service. Since the geographic scale for the index is at the block group level, both local and regional planners can utilize the TAIT effectively for their area of interest. Populations included in this tool are older adults, individuals with disabilities, individuals with lower incomes, and
households without cars. The shaded regions indicate when one or more variables is greater than the regional percentage. The TAIT data is explored in detail in each county's chapter following this Executive Summary.

Transit Accessibility Improvement Tool

Legend
TAIT Variables: Age 65 and Over, Below Poverty, and Persons with Disabilities

| Block Groups Below or Equal to Regional Percentage: All Variables |
| Block Groups Above Regional Percentage: One Variable |
| Block Groups Above Regional Percentage: Two Variables |
| Block Groups Above Regional Percentage: All Variables |

The Transit Accessibility Improvement Tool (TAIT) is a preliminary screening tool to identify areas that may need additional analysis when considering transportation-disadvantaged groups in a plan, project, or program. The TAIT displays Census block groups above the regional percentage for three variables: Age 65 and Over, Below Poverty, and Persons with Disabilities. The Age 65 and Over variable includes all individuals age 65 or older. The Below Poverty variable includes individuals whose household income in the past 12 months was below the Department of Health and Human Services poverty threshold. The Persons with Disabilities variable includes civilian, non-institutionalized individuals with at least one disability that may limit their ability to care for themselves.

To provide a basic understanding of gaps in service, staff also gathered information about the geography and eligibility requirements for current public transportation services. The data sheds light on where gaps in service exist either geographically or for certain populations. This information helped frame discussions at outreach meetings and conversations with stakeholders, and influenced the final strategies for the region as well as each county.

**OUTREACH EFFORTS**

Members of the public including older adults, people with disabilities, individuals with lower incomes, veterans and representatives of local government, transit agencies, workforce agencies and educational institutions participated in outreach meetings across the region. In total, 14 outreach meetings gathered 611 participants to share their thoughts on public transportation needs. In addition, staff followed up with 71 stakeholders representing populations with the greatest transportation needs to gain a deeper understanding of the needs and to prepare strategies that can address those needs.

Invitations to the outreach meetings were mailed and emailed to interested parties in each county, meeting announcements and information were also posted online, and information was shared with partner organizations to help promote the meetings through existing networks. During the meetings, staff gave a brief welcome and introduction to Access North Texas. Following this, an interactive keypad polling session took place to prompt discussion of transportation issues unique to each county. Based on the discussion, community members prioritized issues in each county to help inform strategies in this plan.

A transportation poll was also available online and in paper, and translated into English and Spanish. The poll collected first-hand data about public transportation in the region from both riders and organizations that work with transit-dependent populations. Polls completed by individuals reveal personal experiences with transportation challenges. Polls completed by organizations on behalf of their clients illuminate issues seen by client advocates. Both forms of the poll provide personal views of the transportation environment in the region. A total of 1,081 complete polls were returned. Information collected through the poll informed both regional and county strategies. The distribution of poll responses can be seen in the map below.

**RECOMMENDATIONS**

The regional strategies below identify and prioritize ways to address public transportation needs across the 16-county region.

**Regional Strategies for Coordinated Public Transportation**

**Regional Strategy 1** In areas with no public transit service, assess community needs and implement transit

**Regional Strategy 2** Continue and expand projects that have a no-wrong-door approach to accessing transit or information about available transit

**Regional Strategy 3** Create partnerships to simplify regional trips and reduce the number of transfers between providers

**Regional Strategy 4** Explore partnerships to increase the affordability of fares for those most in need

**Regional Strategy 5** Work towards uniform, regional fares to simplify and reduce the cost of regional trips for riders

**Regional Strategy 6** Advocate to integrate funding sources to maximize efficiency and increase available affordable public transportation

**Regional Strategy 7** Identify, evaluate, and implement where appropriate non-traditional ways to deliver public transportation service, including partnerships among public transit agencies, private transportation providers, and transportation network companies

**Regional Strategy 8** Identify, recruit, educate, and support influential champions for public transportation (elected officials, community leaders, or busi-
ness leaders) to promote and support public transit through leadership, policy, or funding initiatives.

In addition to the regional strategies listed here, specific county strategies are identified within each county chapter.

Implementing the Plan

Transportation providers and local stakeholders will collaborate to determine next steps, form needed partnerships, identify and pursue funding, and ultimately implement selected strategies. Organizations that want to implement a strategy listed in this plan will need to develop strong partnerships with transportation providers, stakeholder agencies, communities, and counties. NCTCOG staff is available to help organizations identify potential partners and coordination opportunities. Organizations should also identify potential funding sources, which can be a mix of private and public funds, including funds from local, state, and federal sources. Local funds from public and private sources are important to demonstrate a community or organizational commitment to implementing specific strategies. Local funds are especially important to leverage state and federal dollars. The Texas Department of Transportation (TxDOT) and NCTCOG have regular calls for projects to award.
federal funds that support projects and strategies listed in this plan.

**Characteristics of a highly competitive project:**

- Is multi-year. A three year request is recommended for projects providing transit service;
- Identifies an existing public transit provider or existing non-profit transportation provider when proposing to provide transit service;
- Targets individuals with lower incomes for requests of Urbanized Area Formula Program (Job Access/Reverse Commute projects) funds;
- Targets older adults and individuals with disabilities for requests of Enhanced Mobility of Seniors and Individuals with Disabilities Program funds; and
- Supports one or more strategies outlined in this plan.

If a project is funded through NCTCOG or TxDOT, staff will document the project funding in the Transportation Improvement Program, coordinate necessary approvals, develop contract agreements, and work with implementing agencies to manage the project and all compliance activities associated with federal or state funding.
INTRODUCTION
The purpose of Access North Texas is to improve public transportation for older adults, individuals with disabilities, and individuals with lower incomes. These populations can have difficulty finding public transportation options that connect them to doctor’s appointments, work opportunities and education or job training. This plan identifies where these transportation connections do not exist or could be improved within Johnson County. This chapter will give an overview of the planning process, research conducted and collected, the public outreach meeting, the transportation poll used to collect personal input on public transit needs, and the prioritized strategies for Johnson County.

PROCESS
This plan is required by federal guidance to be updated every four years. The plan must be developed and approved through a process that included participation by seniors; individuals with disabilities; representatives of public, private, and nonprofit transportation; human services providers and other members of the public. The plan is updated to address current public transportation needs of the residents of Johnson County. Through the process and methods described, prioritized strategies were developed so that future public transportation projects can be implemented when federal and state funding becomes available.

Two different types of research were conducted during this plan update: data-based and people-based.

Data-based research included obtaining, reviewing, and analyzing Census data; using Census data to develop a mapping tool to identify locations where transit-dependent individuals may live; and identifying existing public transportation providers. The people-based research included reaching out to communities, organizations, and individuals to obtain feedback about the existing public transportation system and how it could be improved. Feedback was obtained through a public outreach meeting and a transportation poll. Through an interactive process, stakeholders prioritized concerns about transit access.

RESEARCH
The Transit Accessibility Improvement Tool (TAIT)
The TAIT was developed to identify locations with certain demographic factors that may indicate a greater need for public transportation. The populations of individuals over age 65, residents below the poverty line, and persons with disabilities were each compared to the regional percentage of the population in that demographic. A map was created based on areas that were above the regional percentage in zero, one, two, or all three of the demographic categories. The more categories that an area is deemed above the regional percentage, the more likely it is that area is to need transit. Zero car households was provided as a supplemental layer to identify households above the regional percentage that do not have a working vehicle available. The tool is useful in identifying groups of people who could benefit from transit services, but is not intended to be the deciding factor in decisions regarding public transportation.
The Transit Accessibility Improvement Tool (TAIT) is a preliminary screening tool to identify areas that may need additional analysis when considering transportation-disadvantaged groups in a plan, project, or program. The TAIT displays Census block groups above the regional percentage for three variables: Age 65 and Over, Below Poverty, and Persons with Disabilities.

Source: 2015 American Community Survey 5-Year Estimates
In Johnson County, there are census block groups where the populations of individuals age 65 and over, below the poverty line, and with disabilities are all above the regional percentages. The areas above the regional percentage in all three variables are mostly in the central and southern part of the county, including along the SH 174 corridor in Rio Vista, Cleburne, and Joshua, along I35W in Grandview, north of US 67 near Keene, east of SH 171 near Godley, west of I35W in Briaroaks, and in rural Johnson county along the Chisholm Trail Parkway. The census block west of Rio Vista and south of US 67, and two census block groups southwest of Mansfield are above the regional percentage in persons below the poverty line and persons with disabilities. The remainder of county census block groups with two variables above the regional percentage are persons age 65 and over and persons with disabilities. Generally, areas with a single variable above the regional percentage in the eastern and northern parts of the county are persons with disabilities. The areas with a single variable above the regional percentage in the central part of the county are primarily persons age 65 and over, with some block groups in Cleburne having a higher than regional percentage of persons below the poverty line. Zero car households above the regional percentage are mostly located along SH 174 in the central and southern parts of Johnson County. In eastern Johnson County, zero car households above the regional percentage are found along I35W and US 67. The highest proportion of persons living below the poverty line is found within Cleburne. Additionally, the highest proportions of persons with disabilities live within Cleburne and between Godley and Joshua.

Additional Demographic and Commuter Information

Johnson County continues to experience a steady amount of growth. According to the American Community Survey’s 2015 5-year estimates, since the 2010 Census, Johnson County’s population has increased by 3.0%. In comparison, the 16-county region has grown 6.3% in that same time period. Public transportation needs will change as the population grows. Within Johnson County, 5.4% of residents speak English less than very well. Efforts to promote existing or new transit services should include strategies to reach this population.

According to U.S. Census employer information as of 2014, Johnson County is home to around 41,000 jobs, with approximately 17,000 of those workers living within the county. Nearly 24,000 workers commute into the county, while 48,000 commute out of the county to access their jobs. About 38% of Johnson County workers live within 10 miles of their jobs, and the majority of commuters into the county enter from the north and northwest. The economy in Johnson County is fairly diverse, with educational and manufacturing jobs each providing around 14% of the jobs in the county. The county’s employees are fairly well educated too, with 40% of workers having some college experience or a degree.

Transportation Resources

The main public transportation provider is City/County Transportation, which provides a commuter bus route to downtown Fort Worth and public transportation within Johnson County, Monday through Friday. Transportation is available to the general public as well as older adults and individuals with disabilities. Saturday service is available for the city of Cleburne. The commuter route has stops in Cleburne, Joshua, Burleson, the Fort Worth Veterans Clinic, and the Intermodal Transportation Center in downtown Fort Worth. Another commuter option, provided by the Fort Worth Transportation Authority (FWTA), is vanpools. Johnson County is the origin for 16 vanpools operated by FWTA.

See Appendix B4, Private Carriers for a list of private transportation providers operating in the 16-county region. These private providers are an additional transportation option that individuals can use for personal trips (if cost-effective), or organizations can contract with to provide specific service for clients.
OUTREACH MEETING
The public meeting for Johnson County was held on October 24, 2016 at the Cleburne Conference Center in Cleburne. 114 invitations were mailed and emailed to interested parties throughout the county. Meeting announcements and information were also posted online, and invitees were encouraged to share the invitation with partner organizations and clients to help promote the meetings. A total of 24 people attended the meeting.

Following a general welcome and presentation about public transit within the county, staff led an interactive keypad polling session to instigate discussion of transportation issues with attendees. Based on discussion question answers, community members prioritized current issues in the county and re-prioritized strategies from the 2013 Access North Texas Plan.

Comments and discussion in the public outreach meeting identified that the main public transportation concern is expanding current services. Additional capacity is needed to provide transportation to job opportunities (within Johnson County and into Tarrant County), particularly for alternative shifts; medical appointments in Tarrant County; educational opportunities in Johnson County; and a connection to Dallas/Fort Worth International Airport via downtown Fort Worth. Local governments have not considered public transportation a priority for local funds. Additionally, subsidized fares for low-income individuals would help improve their ability to access public transit.

TRANSPORTATION POLL
A transportation poll was also available to residents and stakeholders, online and in paper, and available in English and Spanish. The poll collected first-hand data about public transportation in the region from riders and organizations that work with transit-dependent populations. Individual poll data revealed personal experiences with transportation. Polls completed by organizations on behalf of their clients explained issues seen by advocates of the people served by each organization. Both forms of the poll provide personal views of the public transportation system.

Johnson County residents submitted eleven responses to the transportation poll. The average age of the respondents is 48, with the youngest 30 and oldest 72. All eleven respondents said they drive themselves and four responded they get a ride with a friend or family member for their transportation needs. Two respondents cited that they have missed trips in the past six months, with both responding they missed medical appointments. One respondent said they missed trips due to not having a car or someone to drive available, and that available public transportation does not meet their needs. Two respondents would be interested in seeing local bus service and commuter bus service, with one respondent interested in a community wide dial-a-ride system.

HOW TO USE THE PLAN
The strategies below identify ways to address the most important public transportation needs stakeholders thought should be implemented over the next few years. These strategies build upon the progress that has taken place since the 2013 Access North Texas plan and should be referenced when state and federal funds for public transportation become available.

Johnson County Prioritized Strategies
Johnson Strategy 1 Expand hours of operation in the evenings to accommodate alternate or third shifts, including coordination with employers

Johnson Strategy 2 Explore partnerships with local employers, medical centers, cities, and other agencies to fund additional transit services

Johnson Strategy 3 Develop additional action plans to increase transit services as well as review governance of City/County Transportation

Johnson Strategy 4 Create and maintain a coordinating committee to discuss ongoing transportation needs

Johnson Strategy 5 Identify a point-person to develop relationships with local agencies to improve
coordination and access to services, jobs and education within Johnson County, as well as regional connections

**Johnson Strategy 6**  Work with an existing transit provider to improve the connection between Johnson County and Fort Worth for medical appointments and work

**Johnson Strategy 7**  Work with an existing transit provider to improve the connection between Johnson County, downtown Fort Worth, and the airport

**Johnson Strategy 8**  Develop partnerships with non-profits, employers, and other partners to make fares more affordable for very low-income individuals

**Johnson Strategy 9**  Educate local officials on available transit services, local demand, opportunities to leverage funding, and opportunities for economic development with transit

**Johnson Strategy 10**  Work with 2-1-1 at least biannually to ensure transportation resources are up-to-date

**Johnson Strategy 11**  Conduct targeted marketing to local agencies about existing transportation resources

**Regional Strategies for Coordinated Public Transportation**

Much like the county strategies, the regional strategies may also be applicable to Johnson County.

**Regional Strategy 1**  In areas with no public transit service, assess community needs and implement transit

**Regional Strategy 2**  Continue and expand projects that have a no-wrong-door approach to accessing transit or information about available transit

**Regional Strategy 3**  Create partnerships to simplify regional trips and reduce the number of transfers between providers

**Regional Strategy 4**  Explore partnerships to increase the affordability of fares for those most in need

**Regional Strategy 5**  Work towards uniform, regional fares to simplify and reduce the cost of regional trips for riders

**Regional Strategy 6**  Advocate to integrate funding sources to maximize efficiency and increase available affordable public transportation

**Regional Strategy 7**  Identify, evaluate, and implement where appropriate non-traditional ways to deliver public transportation service, including partnerships among public transit agencies, private transportation providers, and transportation network companies

**Regional Strategy 8**  Identify, recruit, educate, and support influential champions for public transportation (elected officials, community leaders, or business leaders) to promote and support public transit through leadership or policy initiatives and to advocate for increasing investment in public transit

**Implementing the Plan**

Transportation providers and local stakeholders will collaborate to determine next steps, form needed partnerships, identify and pursue funding, and ultimately implement selected strategies. Organizations that want to implement a strategy listed in this plan will need to develop strong partnerships with transportation providers, stakeholder agencies, communities, and counties. NCTCOG staff is available to help organizations identify potential partners and coordination opportunities. Organizations should also identify potential funding sources, which can be a mix of private and public funds, including funds from local, state, and federal sources. Local funds from public and private sources are important to demonstrate a community or organizational commitment to implementing specific strategies. Local funds are especially important to leverage state and federal dollars. The Texas Department of Transportation (TxDOT) and NCTCOG have regular calls for projects to award federal funds that support projects and strategies listed in this plan.

**Characteristics of a highly competitive project:**
- Is multi-year. A three year request is recommended for projects providing transit service;
- Identifies an existing public transit provider or existing non-profit transportation provider when proposing to provide transit service;
• Targets individuals with lower incomes for requests of Urbanized Area Formula Program (Job Access/Reverse Commute projects) funds;

• Targets older adults and individuals with disabilities for requests of Enhanced Mobility of Seniors and Individuals with Disabilities Program funds; and

• Supports one or more strategies outlined in this plan.

If a project is funded through NCTCOG or TxDOT, staff will document the project funding in the Transportation Improvement Program, coordinate necessary approvals, develop contract agreements, and work with implementing agencies to manage the project and all compliance activities associated with federal or state funding.

**APPENDIX**

For more detailed information about Johnson County, please see Appendix C-Johnson, available online at www.accessnorthtexas.org. The Public Transportation Toolbox (see Appendix B-3) highlights transit services that can be implemented in the near term to meet specific needs within Johnson County.

See Appendix B-4, Private Carriers for a list of private transportation providers operating in the 16-county region. These private providers are an additional transportation option that individuals can use for personal trips (if cost-effective), or organizations can contract with to provide specific service for clients.

See Appendix B-5, Transit Accessibility Improvement Tool, for additional information on how the tool was developed.

See Appendix B-6, Transportation Poll, for more information about the transportation poll.
